How to upgrade software on the HLF 700 Series

If your machine is connected to the internet, you may be able to update the software through that connection.

Navigate to "Update" as described below, then tap "Check for Updates"

If unsuccessful:

Download the needed update and transfer it to a USB stick.

Note: the USB stick must be formatted for a PC. The machine cannot read a Mac formatted stick. The Mac can use and copy the update to a PC formatted USB stick.

Open the door and insert the USB stick into the port.

Access the main menu by tapping the upper left corner of the screen, tapping "Main Menu" and using the password 123456

Once in the main menu, tap "Settings" then "Advanced Options"

Tap "Update" in the lower right

Tap "Install Local Update"

Tap the grayed out USB icon under "Select a File"

You should now be looking at the files on your USB stick. Navigate to the update and tap it.

Confirm that you have selected the correct file

Tap "Install" at the bottom of the next screen. You can use the option for "New"

The new version of the app should install at this point. You will get a screen confirming that it installed. Tap "Open" at the bottom.

When the tablet reboots and reestablishes the connection with the machine, it will install any needed updates to the hardware. Do not interrupt this process!
