## 1 User Manual

## 2 Exploded views

### 2.1 General exploded view

## EXPLODED VIEWS

---

1. Touch screen assembly
2. Coffee beans hopper
3. Pre-ground coffee chute
4. Key Lock
5. Milk tube passage hole
6. Drip tray
7. Cup holder grid
8. Payment system connection hole
9. Detergent tank / Soluble containers top lid
10. Door
11. Cup raiser

1. Coffee group gear motor
2. Grinder assembly
3. Detergent tank inlet chute's lid
4. Electronic boards assembly
5. Boiler assembly
6. Power supply assembly

## 2.2 Fresh milk assembly exploded view

1. Hot milk air valve (2 ways)
2. Milk assembly rinsing valve (2 ways)
3. Hot milk output exchange valve (3 ways)
4. Hot milk air regulator
5. Milk inlet valve / Detergent inlet valve (3 ways)
6. Inlet pipe rinse / Hot milk serpentine exchange valve (3 ways)
7. Milk restrictor
8. Hot milk pump
9. Milk inlet valve / Detergent inlet valve (2 ways)

### 2.3 Boiler assembly exploded view

1. Hot water valve
2. Mixer 2 valve (only non-fresh milk machine)
3. Mixer 1 valve
4. Coffee valve (3 ways)
5. Temperature probe
6. Milk serpentine inlet
7. Heating element
8. Thermostats
9. Water boiler body
10. Water pump
11. Water inlet valve
12. Flow meter
13. Air-break container

## 2.4 Electronic boards assembly exploded view

1. Output board
2. Water level board
3. Touch screen power supplier
4. Motherboard

## 2.5 Power supply assembly exploded view

1. Main switch
2. Net filter
3. Toroidal transformer
4. Rectifier board
5. Power stabilizer
6. Power cable socket
7. Cooling fan

## 2.6 Coffee group gear motor exploded view

1. Coffee group gear motor
2. Gear motor shaft

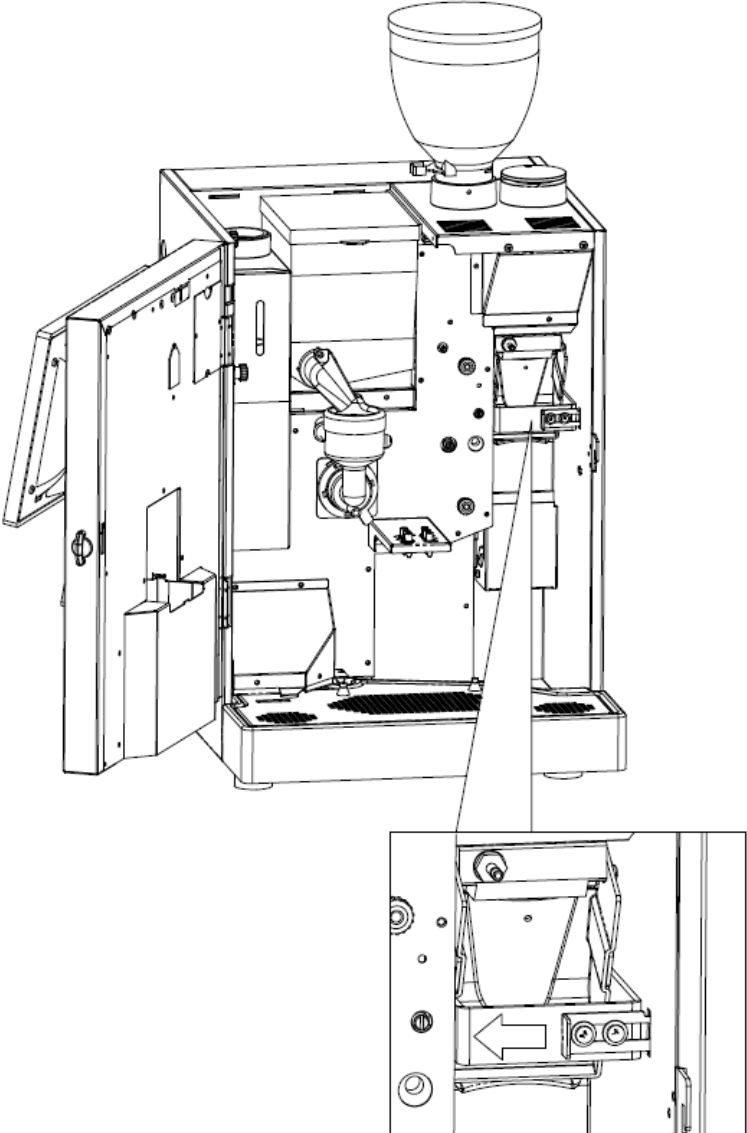

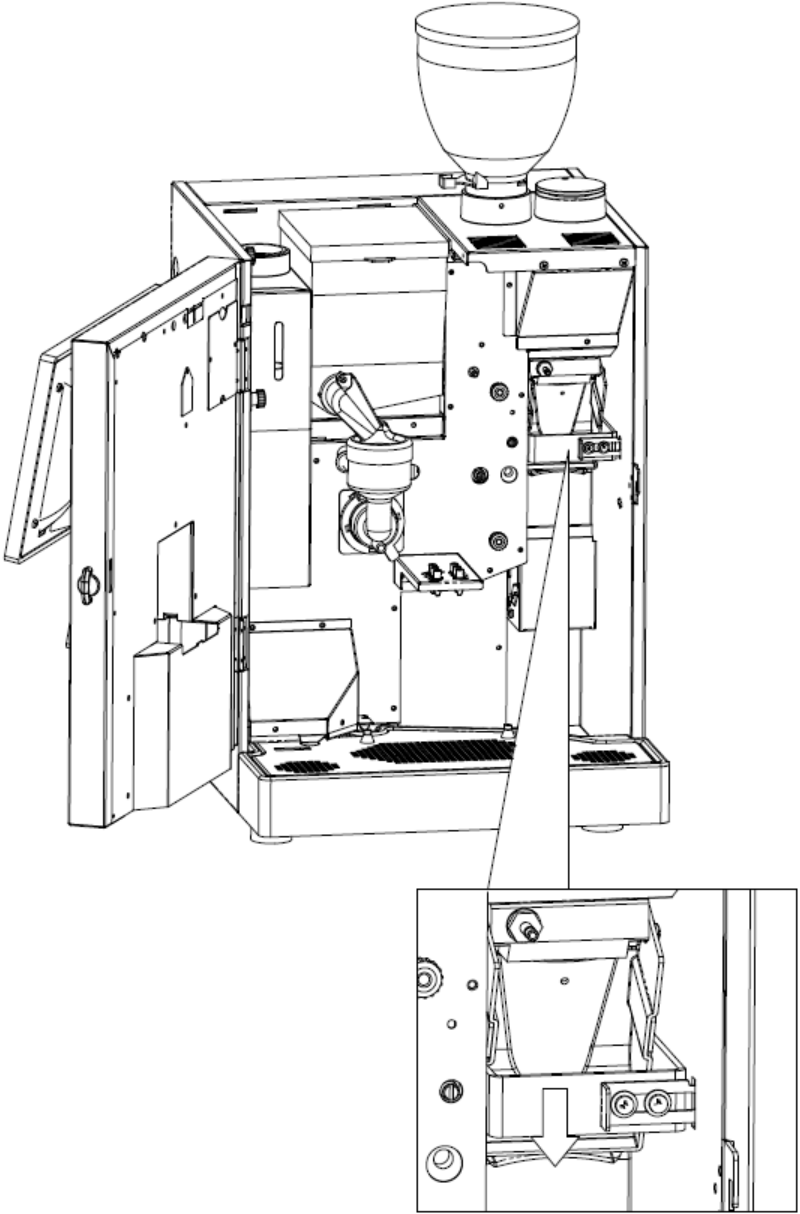

## 4 Ordinary maintenance

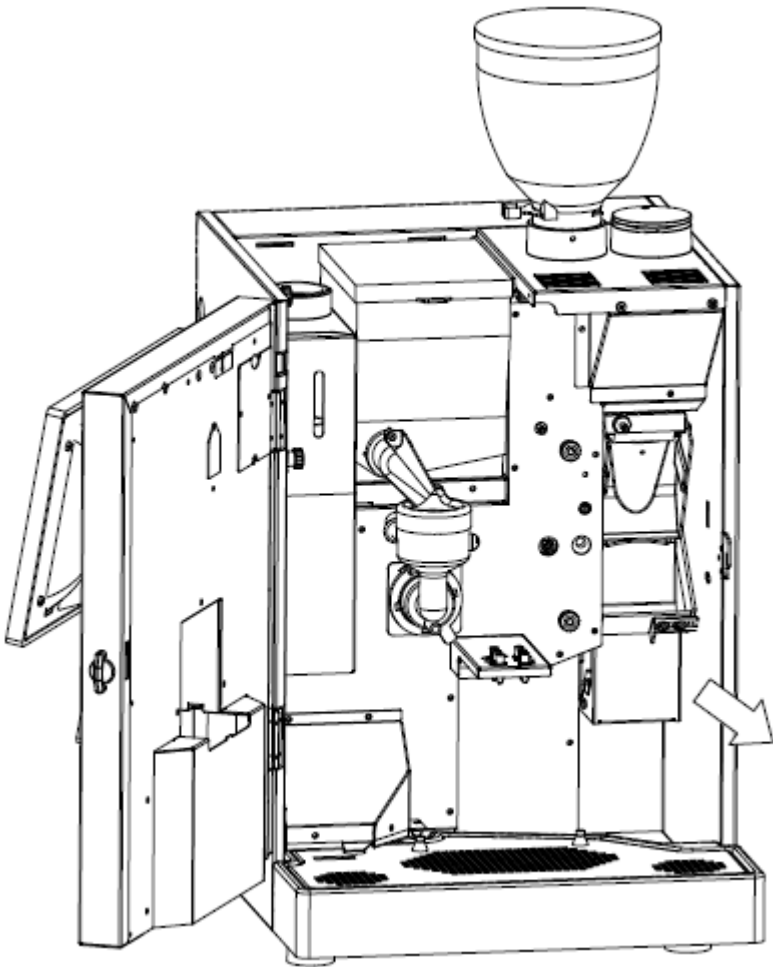

This kind of maintenance has to be considered as a periodical maintenance.

It consists in all those operations to do after an estimated period, according to the factory recommendations.

### 4.1 Removing the coffee group

Step	Action	Illustration
1	<p>Open the door.</p> <p>Remove the <b>drip tray</b> and the <b>grounds drawer</b>.</p> <p>Remove the grey tube connected to the <b>coffee group</b>, from the drink spouts.</p> <p>Unlock the blue <b>coffee group lock lever</b>.</p>	 <p>The illustration shows a coffee machine with its door open to the left. The coffee group is visible in the center. A grey tube is connected to the coffee group and leads to the drink spouts. A blue lock lever is located on the right side of the coffee group. An inset at the bottom right provides a close-up view of the blue lock lever, with a white arrow pointing to the left, indicating the direction to move it to unlock the coffee group.</p>

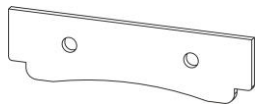

Step	Action	Illustration
2	Turn the <b>coffee group lever</b> downward and let the <b>coffee group</b> to go down.	 <p>The illustration shows a side view of a coffee machine with its front panel open. The coffee group lever is shown in a lowered position. A large white arrow points from the lever to a detailed inset at the bottom right. The inset shows a close-up of the lever's pivot point and the coffee group assembly, with a white arrow pointing downwards to indicate the direction of movement.</p>

Step	Action	Illustration
3	Pull the <b>coffee group</b> toward you and take it off the machine.	

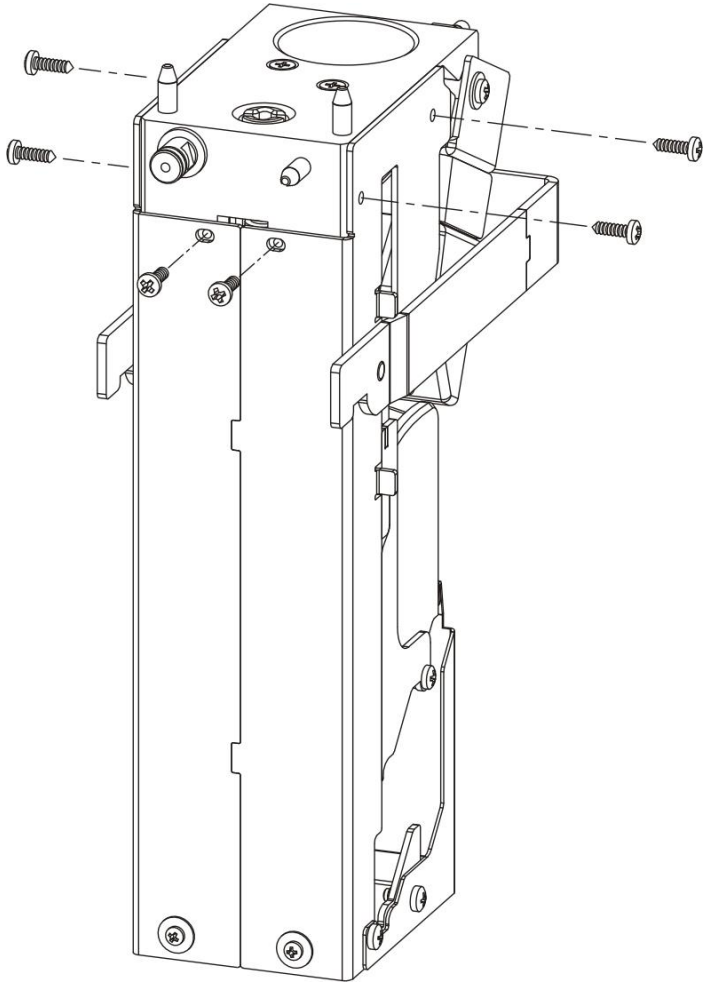

## 4.2 Sealings and filters replacement (10000 Cycles Kit Installation)

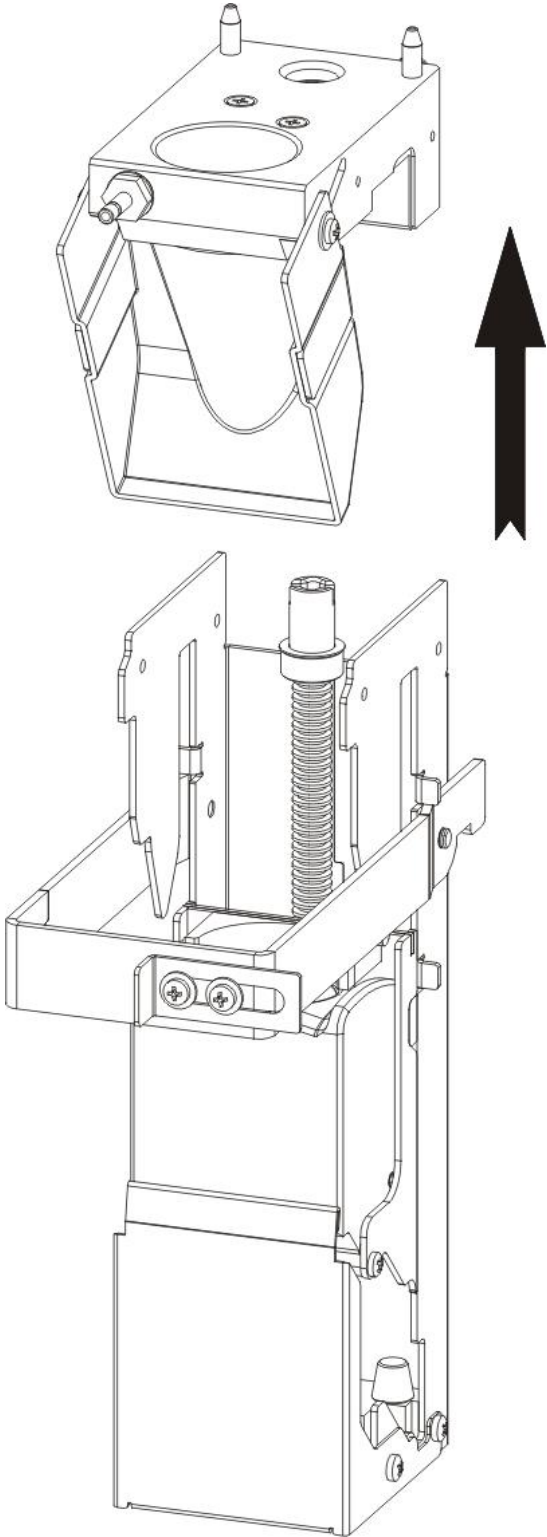

Before to do this operation follow the procedure described on paragraph 4.1 **Removing the coffee group**.

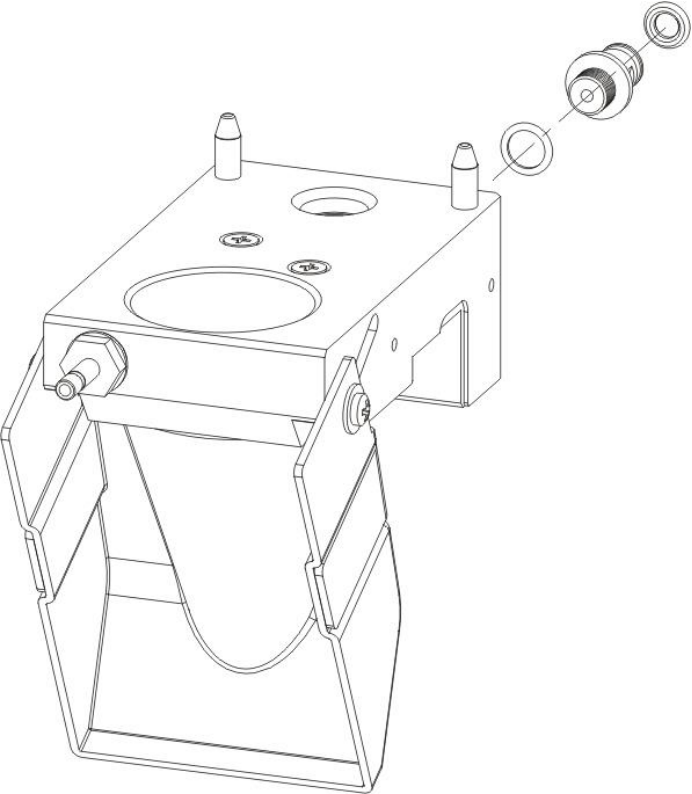

### Components required:

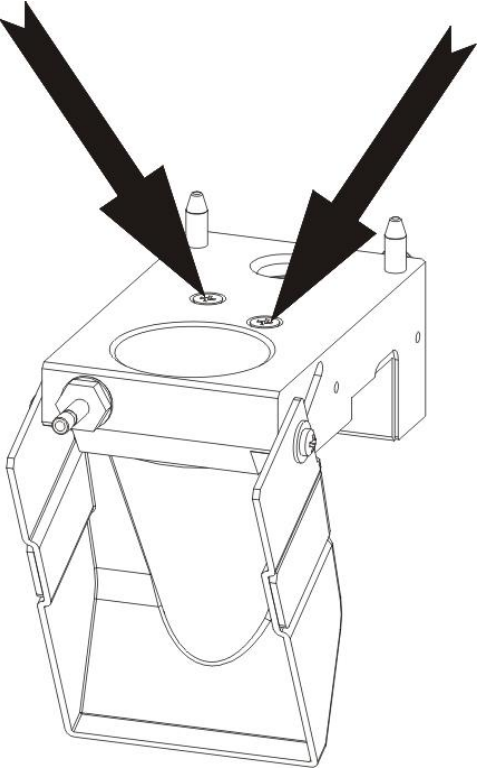

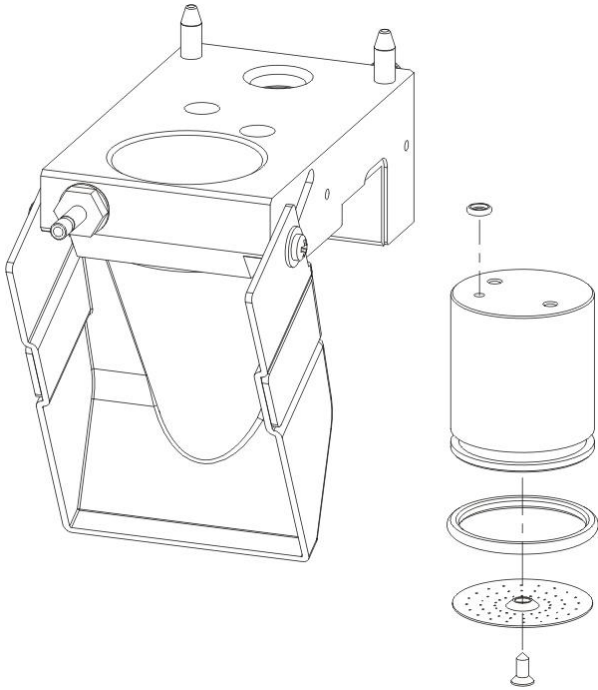

DESCRIPTION	ILLUSTRATION	QUANTITY	NAME
Silicon brush 19 x 70 x 2 mm		1	A
Coffee group filter D.40 mm		2	B
Red silicon O-ring 3024 6,02 X 2,62 mm		2	C
Star silicon gasket		1	D
Red silicon O-ring 03037 9,19 X 2,62 mm		1	E
Red silicon O-ring 04131 32,93 X 3,53 mm		1	F
Red silicon O-ring 2015 3,68 X 1,78 mm		1	G
Red silicon O-ring 2037 9,25 X 1,78 mm		2	H
Silicon lip gasket		1	I
Red silicon O-ring 3150 37,7 X 2,62 mm		1	J

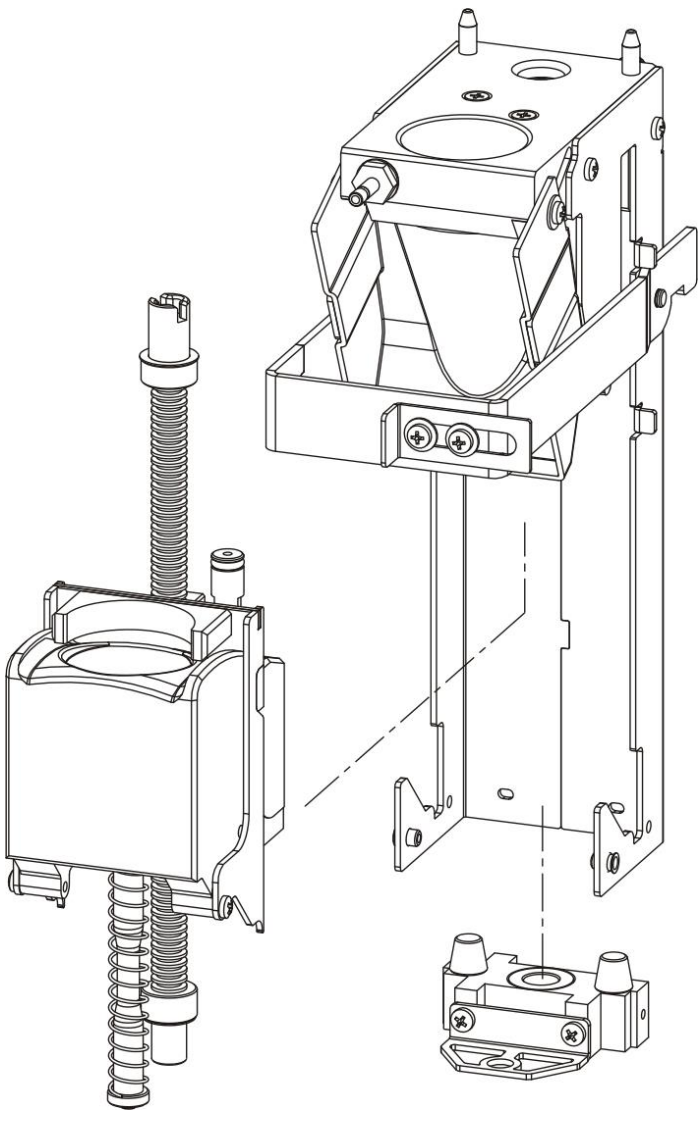

Step	Action	Illustration
1	Remove the 6 screws that hold the <b>coffee group upper base</b> .	

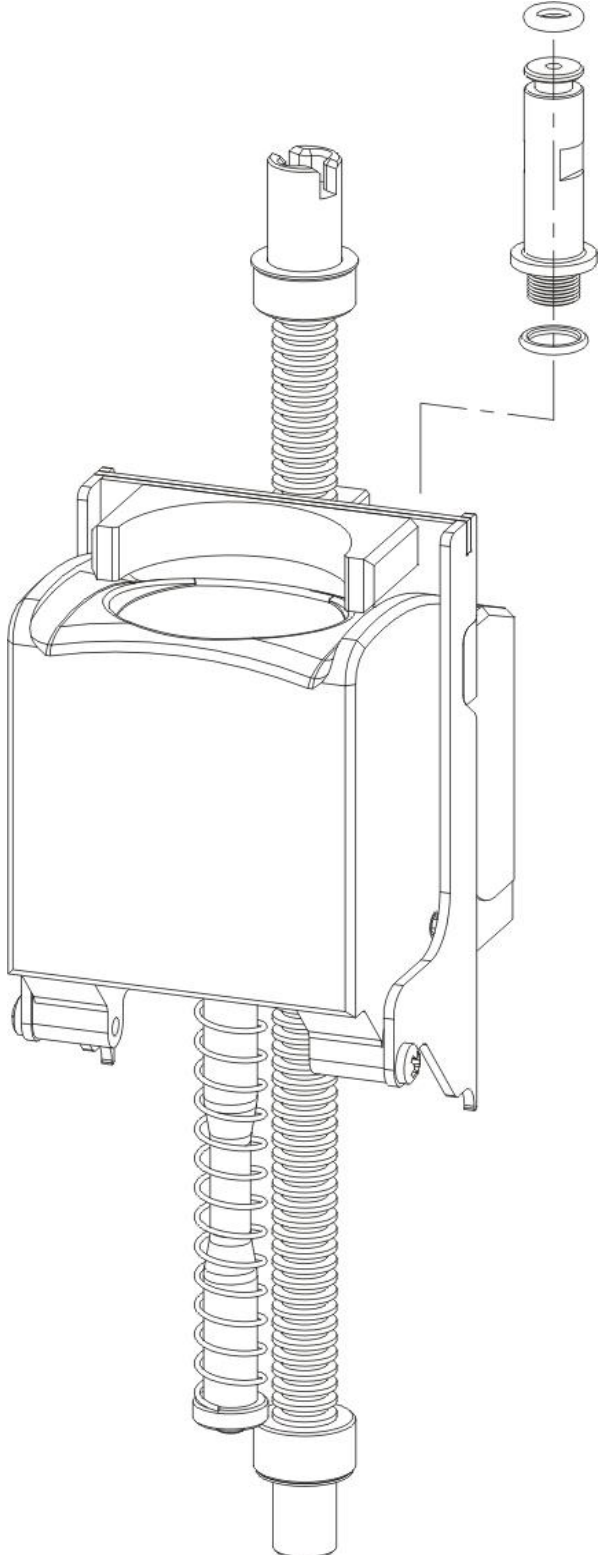

Step	Action	Illustration
2	Take off the <b>coffee group upper base</b> .	

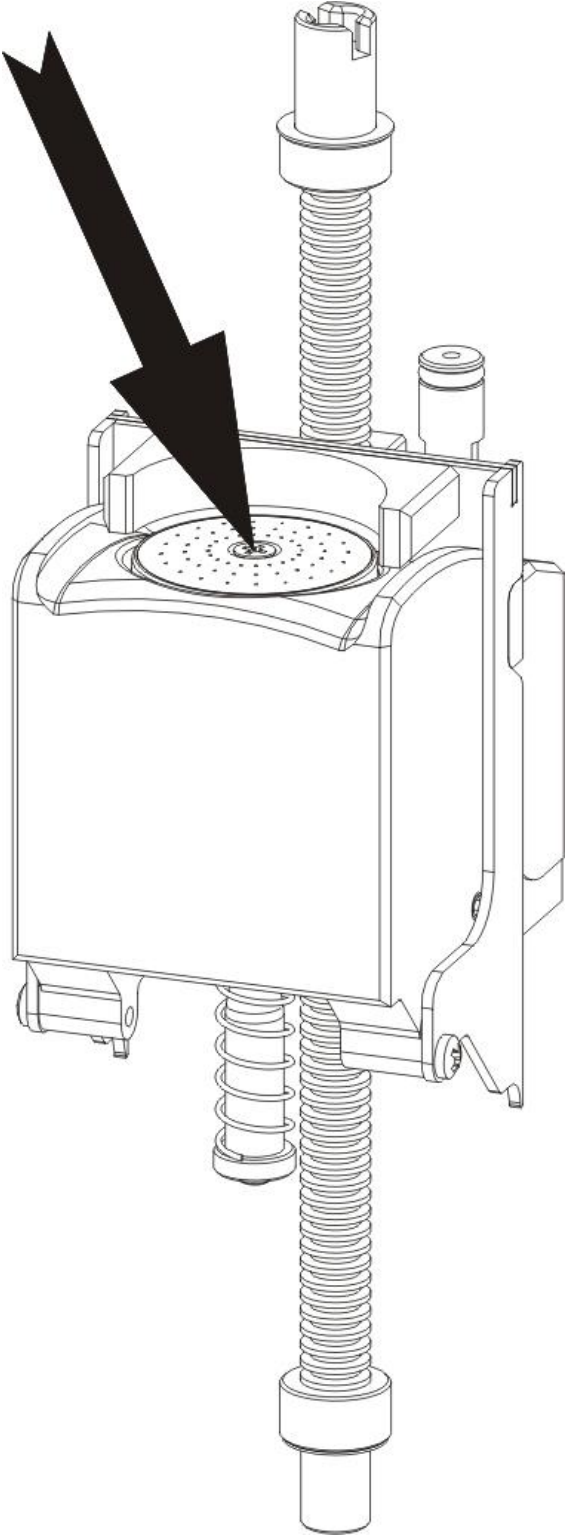

Step	Action	Illustration
3	<p>Unscrew the <b>coffee group inlet nozzle</b> and replace the O-Rings <b>C</b> and <b>H</b>.</p> <p>Put it back.</p>	 A technical line drawing of a coffee machine's group head assembly. The main drawing shows the group head with a coffee handle and a coffee cup. To the right, an exploded view shows the coffee group inlet nozzle being removed from the group head. Two O-rings, labeled C and H, are shown as separate components to be replaced on the nozzle.

Step	Action	Illustration
4	<p>Remove the 2 screws that hold the <b>coffee group top piston</b> and remove it.</p>	
5	<p>Replace:</p> <ul style="list-style-type: none"> <li>- O-Ring <b>F</b></li> <li>- O-Ring <b>G</b></li> <li>- Filter <b>B</b></li> </ul> <p>Put everything back.</p>	

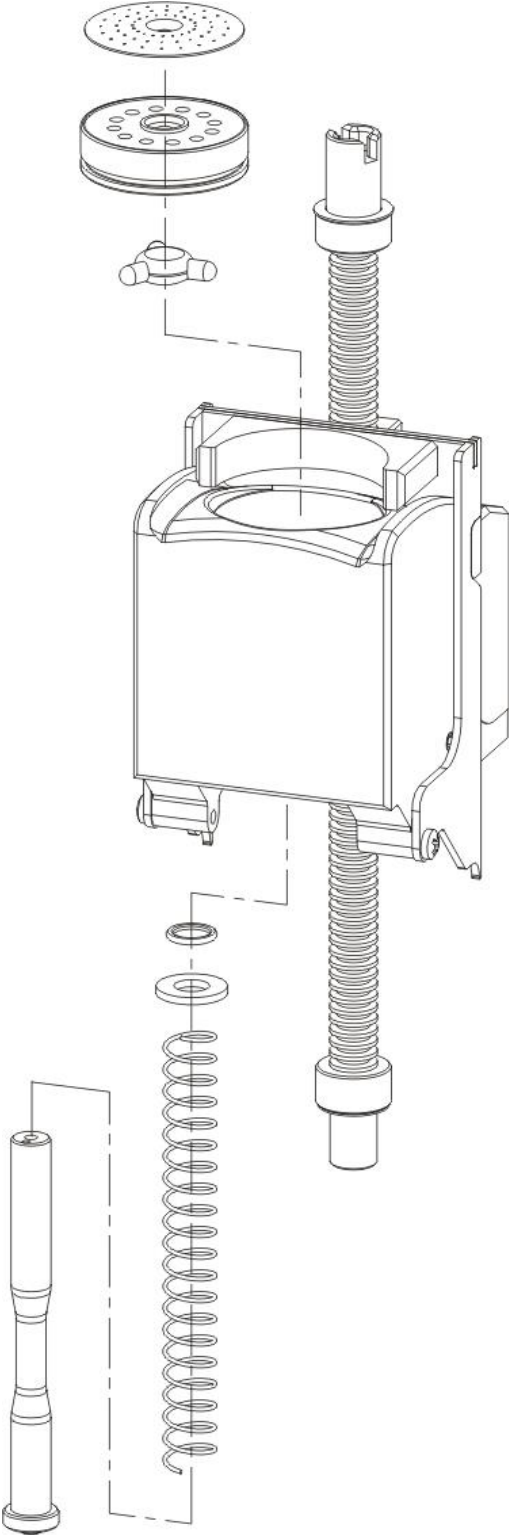

Step	Action	Illustration
6	Remove the 6 screws that hold the <b>coffee group lower base</b> and the <b>cover</b> .	

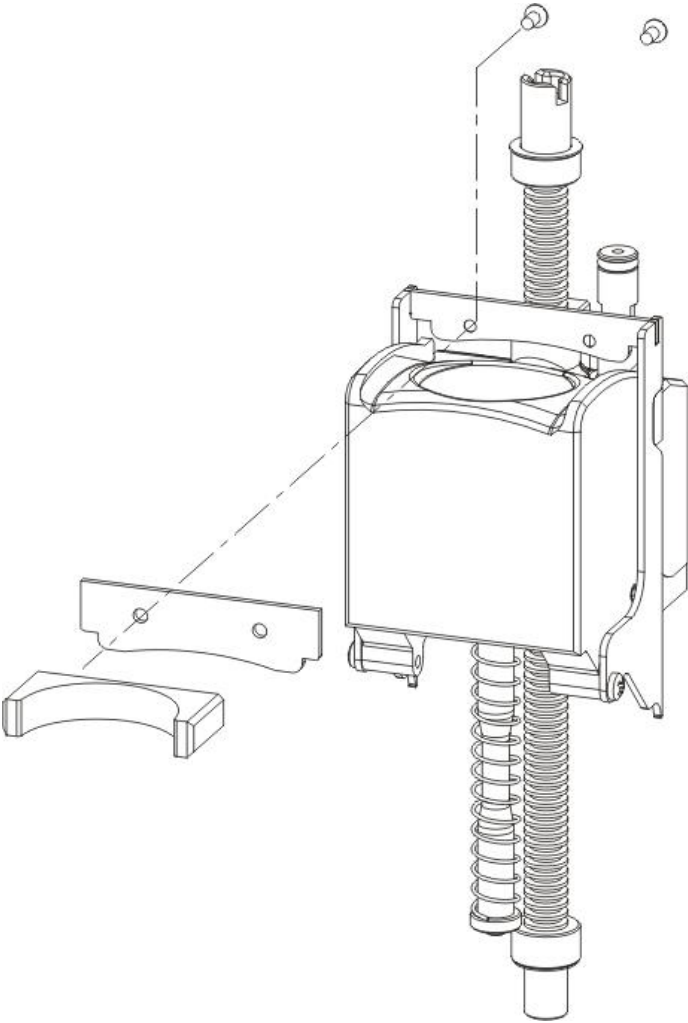

Step	Action	Illustration
7	<p>Take off the <b>coffee group lower base</b>.</p> <p>Take off the <b>coffee group chamber</b>.</p>	 <p>The illustration shows a three-part disassembly process. On the right, the main machine body is shown with the coffee group assembly partially detached. A dashed line indicates the removal of the lower base. In the center, the coffee group chamber is shown being lifted off a long threaded rod. On the left, the coffee group lower base is shown being separated from the main body, revealing the internal spring mechanism. At the bottom right, the coffee group lower base is shown in a separate view, highlighting its internal components and mounting points.</p>

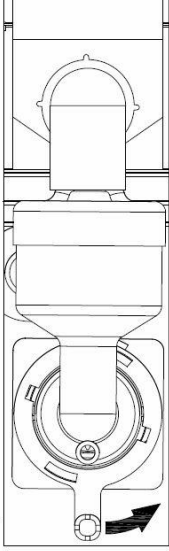

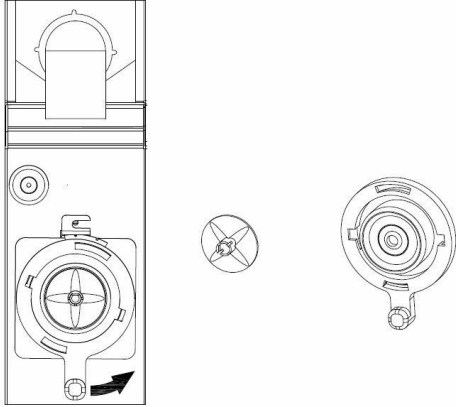

Step	Action	Illustration
8	<p>Unscrew the <b>coffee group inlet nozzle</b> and replace O-Rings <b>C</b> and <b>H</b>.</p> <p>Put it back.</p>	

Step	Action	Illustration
9	Remove the screw that holds the <b>coffee group bottom head</b> to the <b>coffee group shaft</b> .	

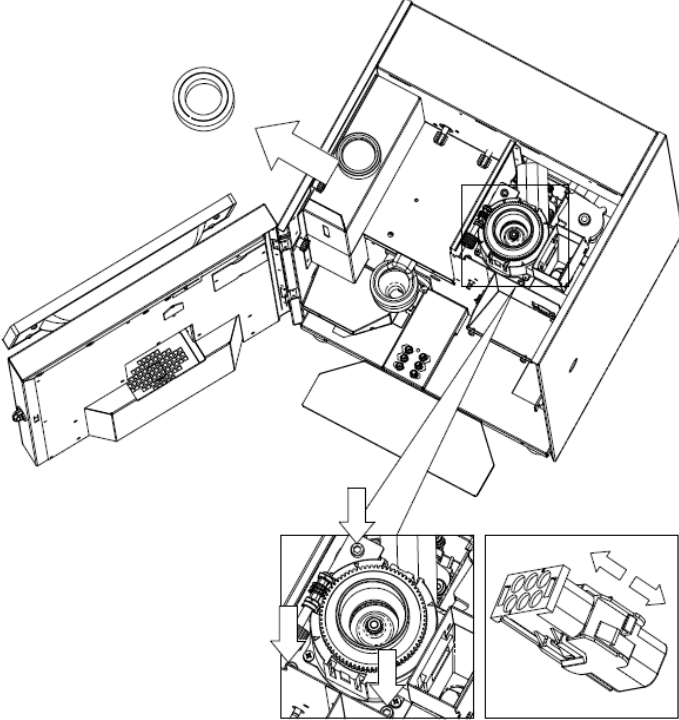

Step	Action	Illustration
10	<p>Remove the <b>coffee group shaft</b>.</p> <p>Replace:</p> <ul style="list-style-type: none"> <li>- filter <b>B</b></li> <li>- gasket <b>D</b></li> <li>- O-Ring <b>E</b></li> </ul> <p>Insert the <b>coffee group shaft</b> into the <b>coffee group chamber</b> and screw back the bottom head.</p>	 <p>The illustration shows an exploded view of the coffee group assembly. At the top, there is a perforated filter (B) and a gasket (D). Below these is a small O-ring (E). The main coffee group chamber is shown in the center, with a threaded shaft passing through it. At the bottom of the shaft, there is a spring and a bottom head. Dashed lines indicate the assembly path and the relative positions of the components.</p>

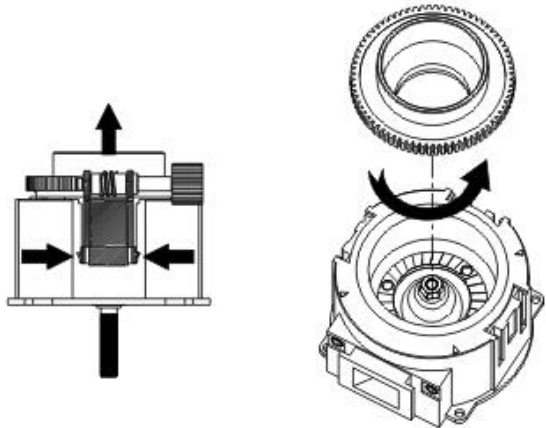

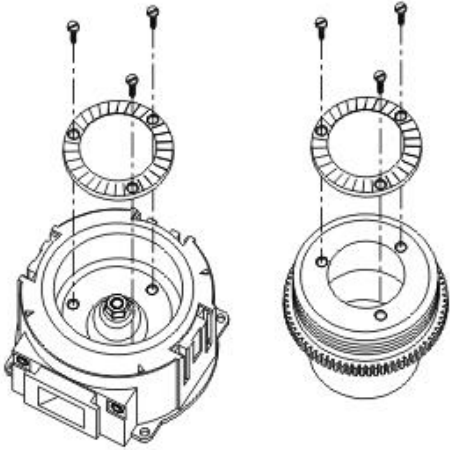

Step	Action	Illustration
11	<p>Remove the 2 screws that hold the <b>coffee group brush holder</b> and replace the silicon brush "A".</p> <p>Put back the <b>coffee group brush holder</b>.</p> <p>Put everything back.</p>	

Step	Action	Illustration
12	<p>Turn right the <b>mixing bowl holder</b> and pull out the <b>mixing bowl</b>.</p> <p>Pull out the <b>mixing blade</b>.</p>	
13	<p>Turn right the <b>mixing bowl holder</b> till the end and pull it out.</p> <p>Replace the lip gasket <b>I</b> and the silicon O-ring <b>J</b>.</p>	

### 4.3 Grinder blades replacement

Before to do this operation, follow the procedure described on paragraph **6.1.1 Removing the top lid.**

Step	Action	Illustration
1	<p>Remove the sound proof material by pulling it up from the grinder.</p> <p>Unscrew the 4 screws that hold the <b>grinder assembly</b> and lift it up completely.</p> <p><b>Note:</b> while removing the <b>grinder assembly</b>, unplug the 6 ways connector connected to it.</p>	

Step	Action	Illustration
2	<p>Push both the internal clips of the grinder regulator's plastic support and pull it up.</p> <p>Turn the <b>grinder head</b> counter-clockwise until it's completely out of the base.</p>	
3	<p>Unscrew the 3 screws for both <b>grinder head</b> and <b>grinder base</b> and pull up the blades.</p> <p>Install the new blades and follow the instructions backwards.</p> <p>Lastly, after fixing the plastic grinder regulator to the grinder base, make sure to push the internal clips to the internal sides, to ensure a more solid fixing position.</p>	

## 6 Extraordinary maintenance

This kind of maintenance has to be considered in case of faults.

### WARNING

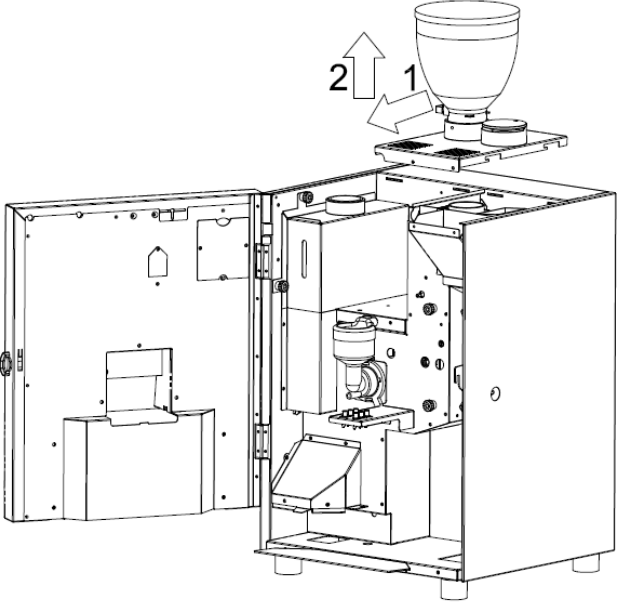

All the operations contained in this chapter has to be performed with the machine switched OFF and the power cord removed.

### 6.1 Removing the various metal plates

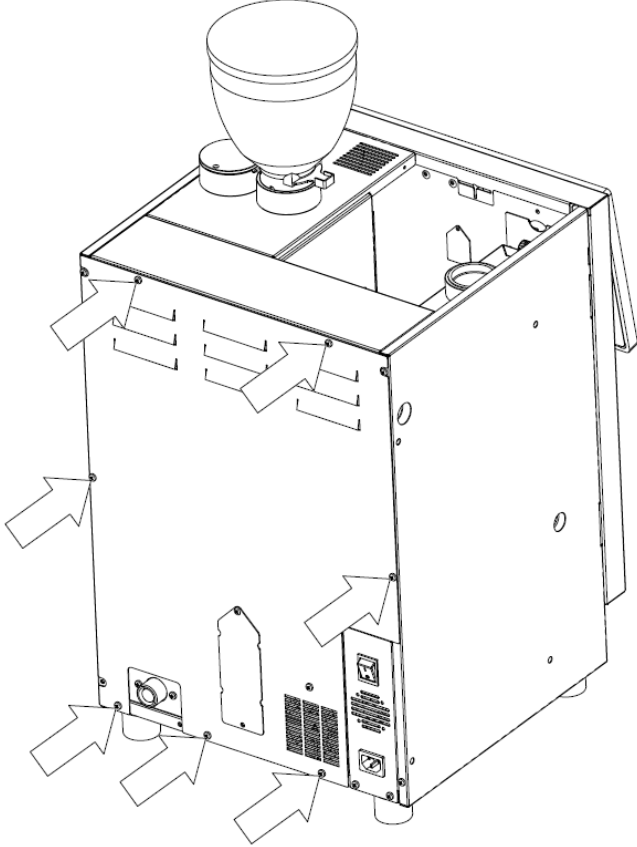

This paragraph shows how to remove the various machine metal plates to reach the components.

#### 6.1.1 Removing the top lid

Step	Action	Illustration
1	Remove the 2 screws that hold the <b>top lid</b> from the front.	

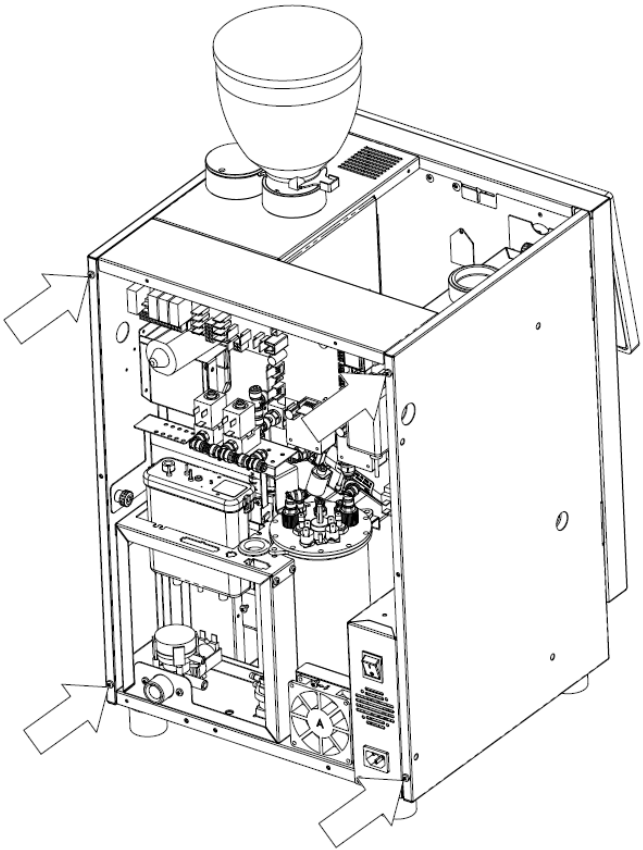

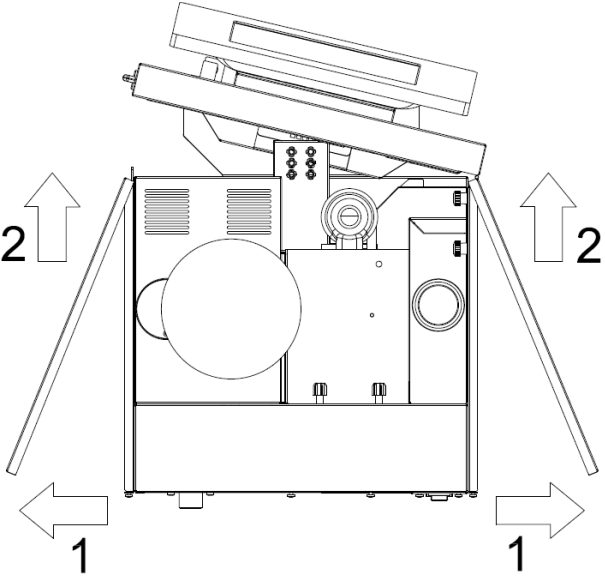

Step	Action	Illustration
2	Pull the <b>top lid</b> towards you and then lift it up.	

6.1.2 Removing the external panels

Step	Action	Illustration
1	<p>Take off the drip tray.</p> <p>Unscrew the 7 screws that hold the <b>back panel</b>.</p>	

- 2 Pull the **back panel** towards you and disconnect the ground wiring that connects the machine to the panel.

<p>3</p>	<p>Unscrew the 4 screws that hold the <b>side panels</b>.</p>	
<p>4</p>	<p>Slightly open the door.</p> <p>Open the <b>side panels</b> and push each one to the front.</p>	

## 7 Removing assemblies

This kind of maintenance has to be considered in case of faults.

### WARNING

All the operations contained in this chapter has to be performed with the machine switched OFF and the power cord removed.

### 7.1 Removing the grinder assembly

Before to do this operation, follow the procedure described on paragraph 6.1.1 **Removing the top lid.**

Step	Action	Illustration
1	<p>Remove the sound proof material by pulling it up from the grinder.</p> <p>Remove the screws that hold the <b>grinder assembly</b> and pull it up.</p> <p><b>Note:</b> while removing the <b>grinder assembly</b>, unplug the 6 ways connector connected to it.</p>	

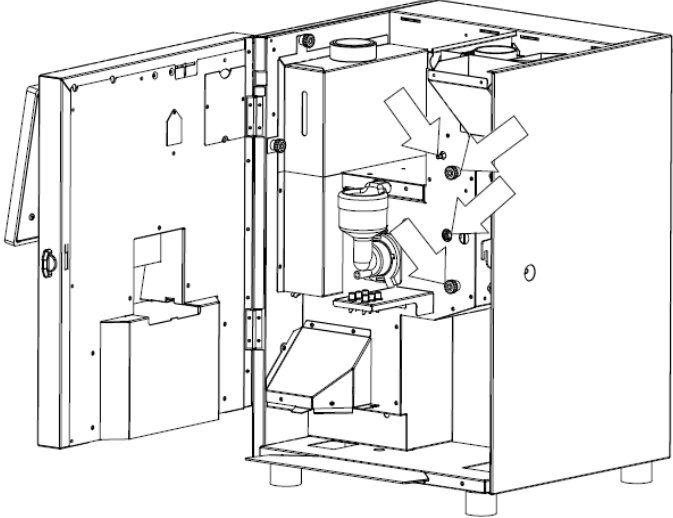

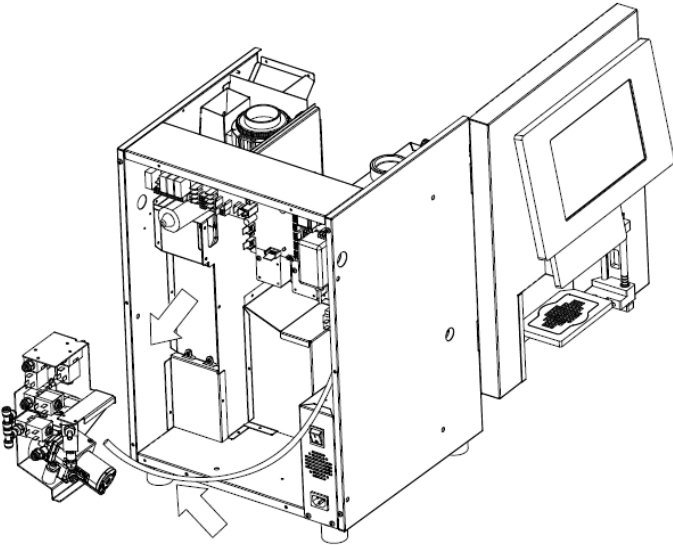

- 2 Pull up the whole grinder assembly and then remove the 3 screws that fixes the grinder motor to the grinder base.

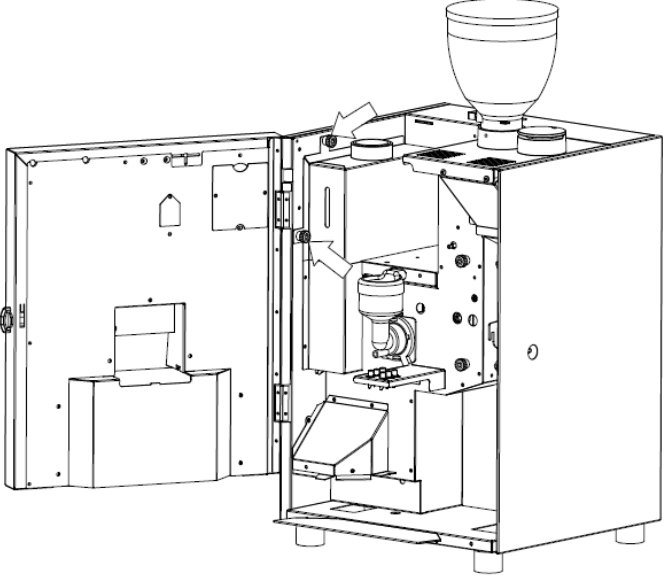

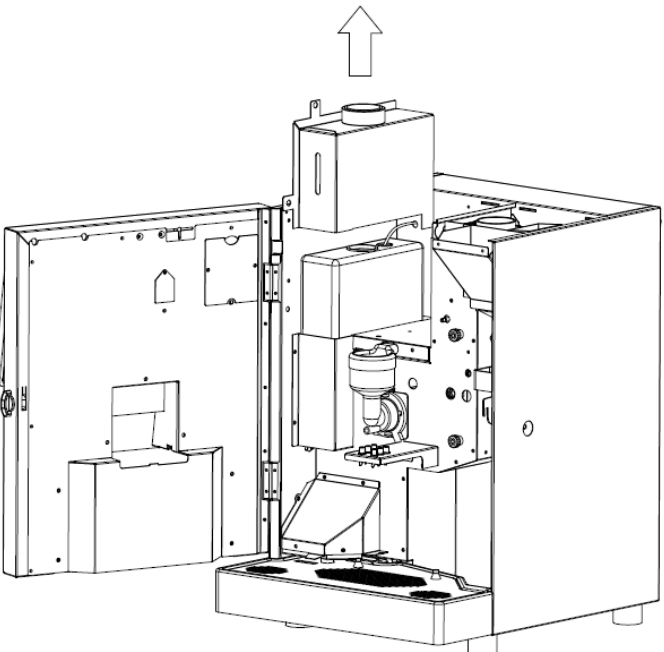

**7.2 Removing the milk assembly**

Before to do this operation, follow the procedure described on paragraph **9.1 Cooling down**, paragraph **6.1.2 Removing the external panel (STEP 1-2)** and paragraph **7.4 Removing the boiler assembly**.

Step	Action	Illustration
1	<p>Disconnect the small grey tube from the black plastic “T” connector as shown (the “T” will remain with only 1 tube, which is going into a plastic non-return valve).</p> <p>Disconnect the 10 ways connector of the <b>milk assembly</b>.</p> <p>Disconnect the small grey tube that is going into the drip tray from the 3 ways milk outlet valve. Disconnect the tube from the plastic junction so there’s no need of re-adjusting the discharge tube from the front.</p>	

Step	Action	Illustration
2	<p>Remove the transparent milk inlet tube from the inlet valve and also remove the grey tube which is connected to the milk outlet 3 ways valve.</p> <p>Remove the 2 knobs that fix the <b>milk assembly</b> to the machine's front plate.</p>	
3	<p>Slide out the <b>milk assembly</b> and disconnect the last tube from the 3 ways milk inlet valve (water/detergent tube).</p>	

7.3 Removing the detergent tank

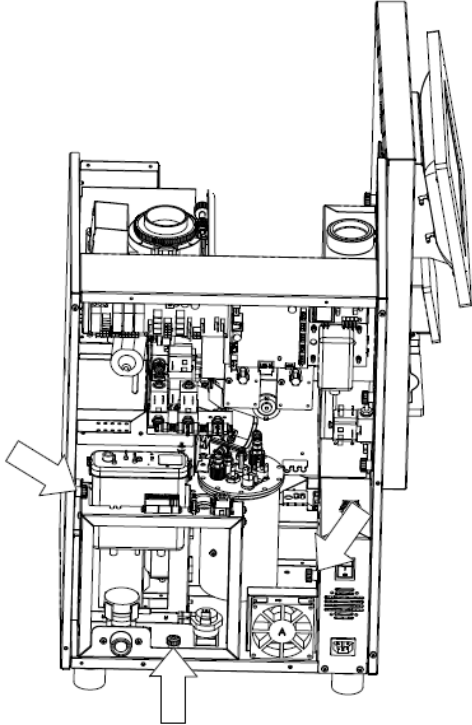

Step	Action	Illustration
1	<p>Open the door and remove the <b>detergent tank</b>/soluble canisters lid, by sliding it out to the front of the machine.</p> <p>Remove the 2 knobs shown in the picture.</p>	 <p>The illustration shows a side view of the machine with the door open. A detergent tank is mounted on top of the machine's internal structure. Two knobs are indicated by arrows, one on the left side of the tank and one on the right side. The tank is positioned above the coffee group and the drip tray.</p>
2	<p>Lift up the <b>detergent tank</b> top cover.</p>	 <p>The illustration shows the detergent tank assembly with the top cover being lifted upwards. An upward-pointing arrow is placed above the top cover to indicate the direction of movement. The top cover is a rectangular box that fits over the top of the detergent tank.</p>

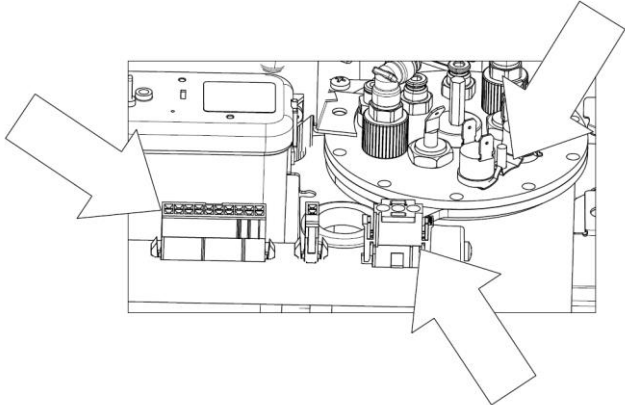

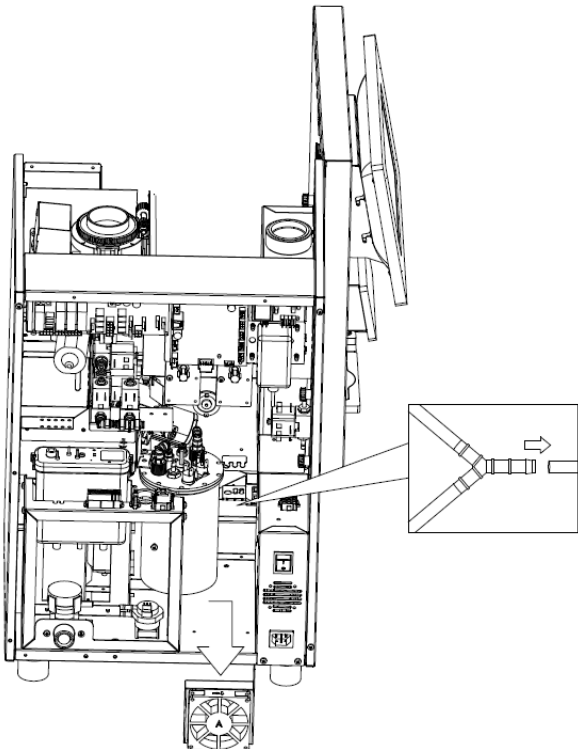

- 3 Disconnect the **detergent tank's** plastic lid that is holding the grey tube.
- Take off the grey tube and lift up the **detergent tank**.

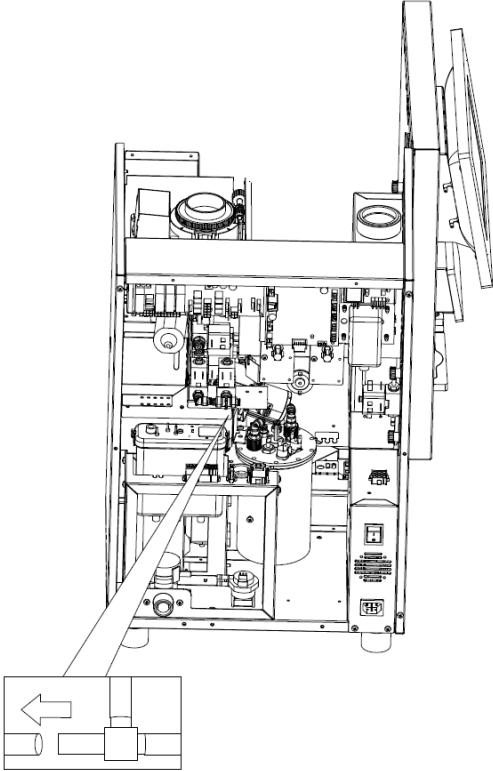

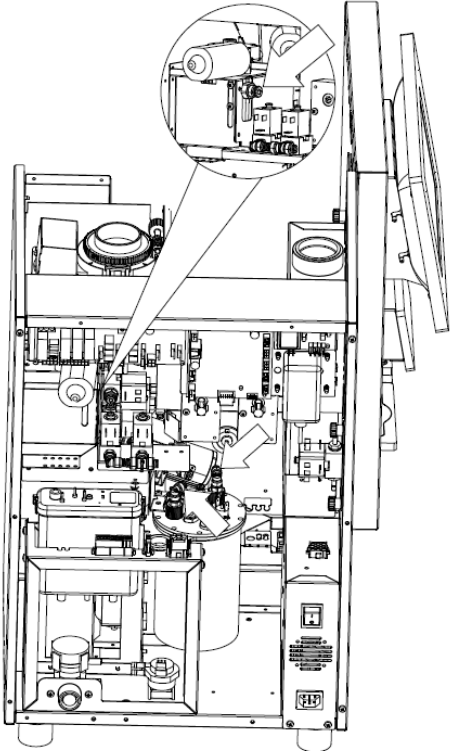

**7.4 Removing the boiler assembly**

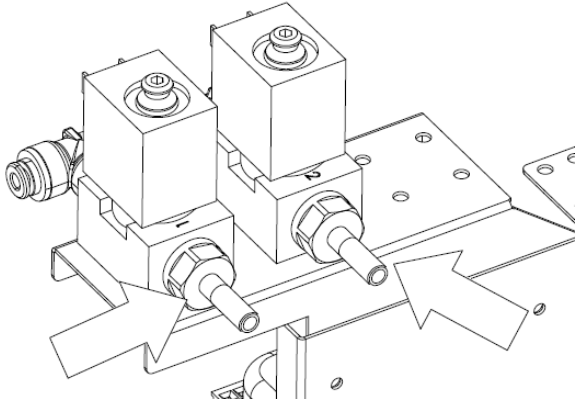

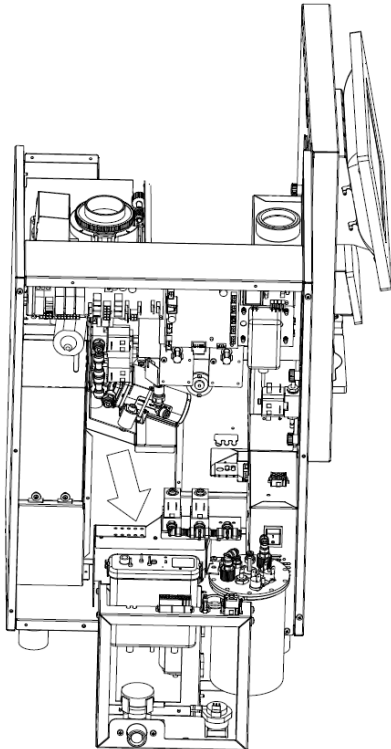

Before to do this operation, follow the procedure described on paragraph **9.1 Cooling down**, paragraph **6.1.2 Removing the external panel** (STEP 1-2).

Step	Action	Illustration
1	<p>Remove the 2 knobs that fix the boiler support bracket to the left side and bottom side of the machine.</p> <p>Also remove the knob that fixes the aspirator to the left side of the power supply assembly.</p>	 <p>The illustration shows a detailed view of the machine's internal assembly. Three white arrows point to specific locations: one on the left side of the boiler support bracket, one on the bottom side of the boiler support bracket, and one on the left side of the power supply assembly.</p>

Step	Action	Illustration
2	<p>Disconnect the 2 connectors indicated in the picture and also the ground cable from the boiler lid.</p>	
3	<p>Start disconnecting the tubes that fix the boiler assembly to the rest of the machine.</p> <p>The suggested order is to start disconnecting the discharge tube from the plastic “Y” connector, located near the drip tray micro switch. Lift up the aspirator to access the “Y” connector. Carefully remove just the tube shown in the picture.</p>	

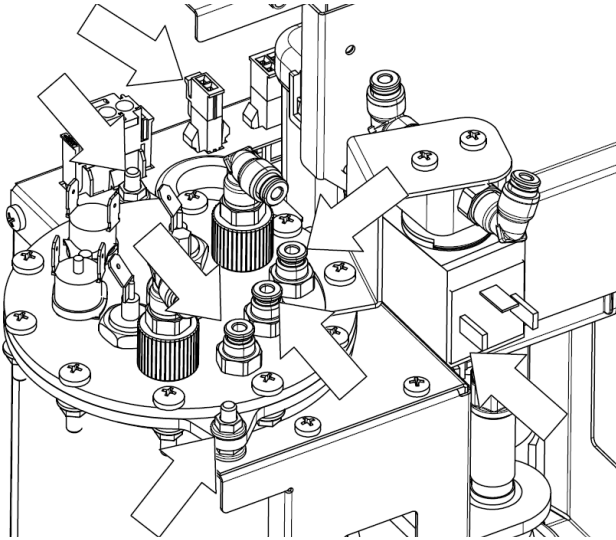

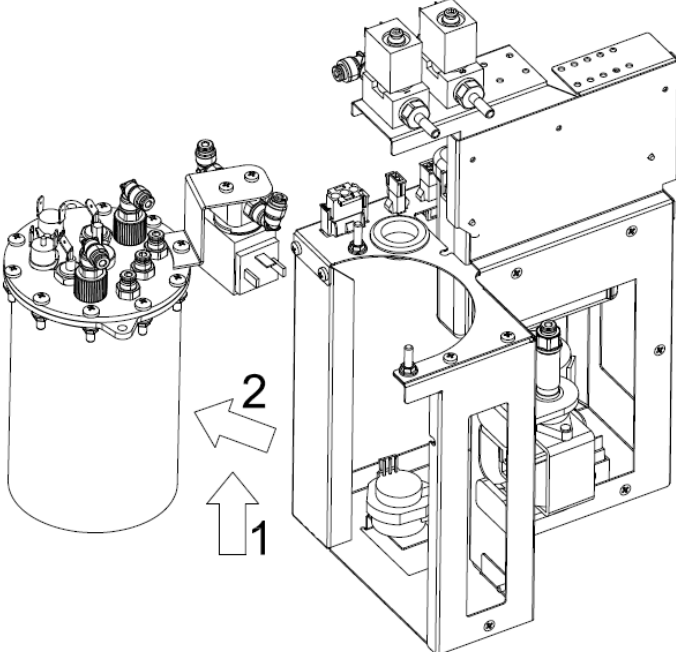

<p>4</p>	<p>Remove the tube from the black plastic “T” connector, as shown in the picture.</p>	
<p>5</p>	<p>Disconnect the milk serpentine inlet tube (connector on the right) and the outlet one (connector on the left) from the boiler lid angled connectors indicated in the picture.</p> <p>Disconnect the tube that goes into the coffee group connector as shown.</p>	

<p>6</p> <p>Disconnect the hot water valve tube from the drink spout in the front of the machine.</p> <p>Slightly pull the boiler assembly towards you and disconnect the mixer valve's tube from the valve's connector (remove the metal clip first).</p>	
<p>7</p> <p>Completely pull the boiler assembly out of the machine.</p>	

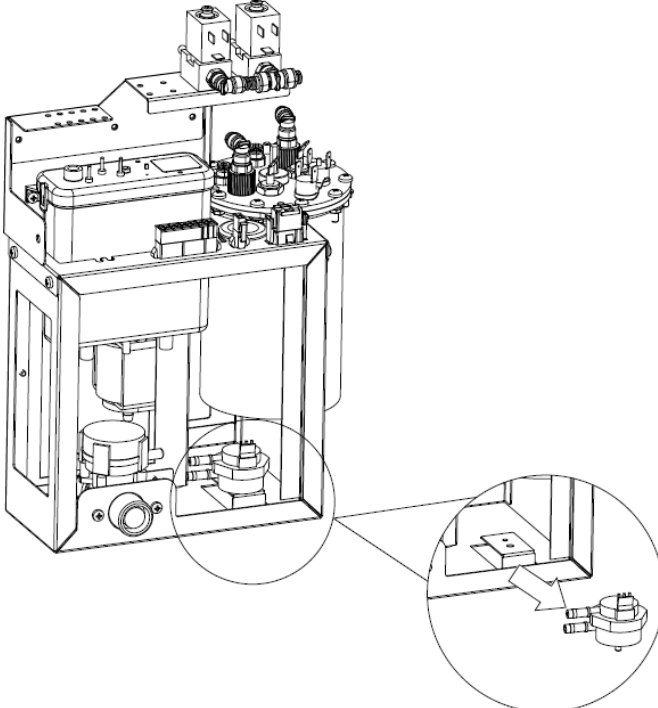

**7.5 Removing the boiler**

Before to do this operation, follow the procedure described on paragraph **9.1 Cooling down**, paragraph **6.1.2 Removing the external panel (STEP 1-2)** and paragraph **7.4 Removing the boiler assembly**.

Step	Action	Illustration
1	<p>Remove the remaining tubes connected to the boiler lid (water inlet, water outlet, overpressure outlet).</p> <p>Remove the grey tube from the 3<sup>rd</sup> way of the coffee valve.</p> <p>Remove the 2 ways connector (temperature probe).</p> <p>Unscrew the 2 nuts that fix the boiler to the assembly.</p>	
2	<p>Lift up, then take the boiler out from the assembly.</p>	

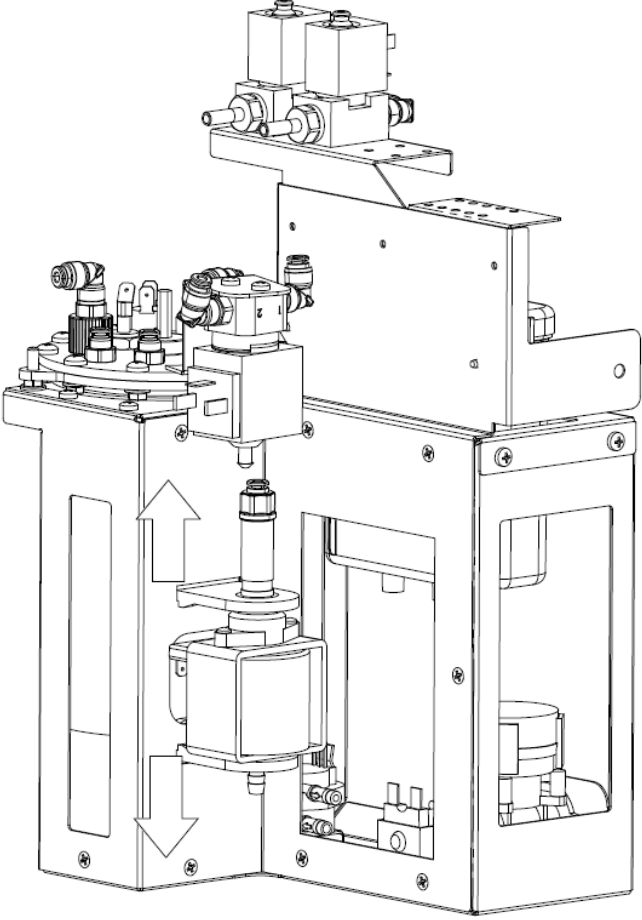

## 7.6 Removing the flow meter

Before to do this operation, follow the procedure described on paragraph **9.1 Cooling down**, paragraph **6.1.2 Removing the external panel** (STEP 1-2). This operation can be done without removing the boiler assembly.

Step	Action	Illustration
1	<p>Disconnect the connector from the top of the flow meter.</p> <p>Disconnect the tubes on the inlet and the outlet lines of the flow meter, from the side of the machine.</p> <p>Lift up the flow meter and disconnect it from the machine.</p>	

### 7.7 Removing the water pump assembly

Before to do this operation, follow the procedure described on paragraph **7.4 Removing the boiler assembly**.

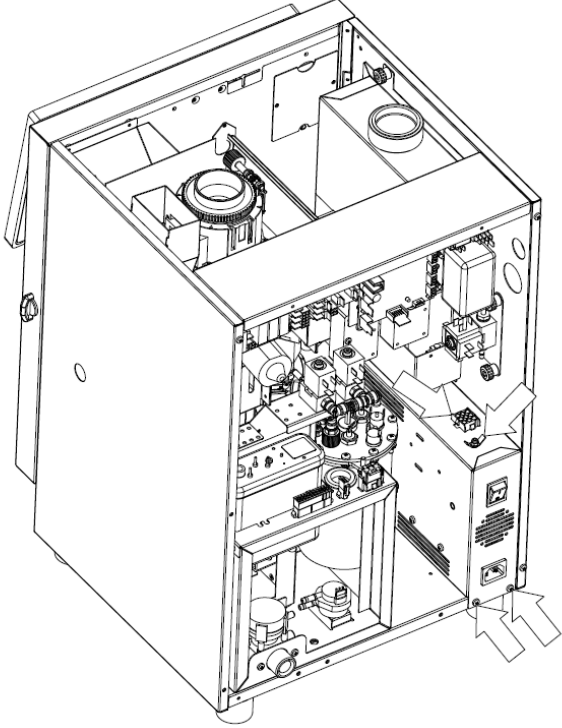

<p>1</p>	<p>Disconnect the electrical connectors and the tubes from the pump.</p> <p>Pull the rubber supports in order to unplug the pump.</p>	
----------	---------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------

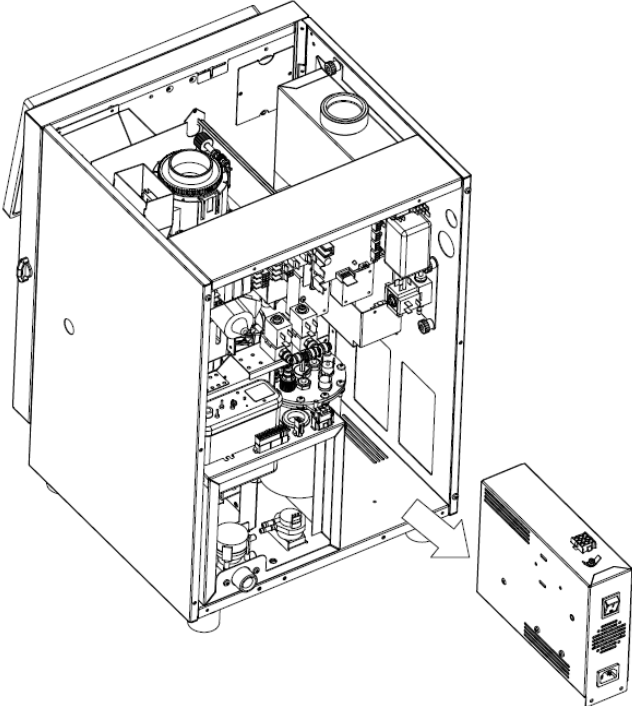

- 2 The pump can be then disconnected. There is no need to remove the connector on the back of the pump, as shown in the picture.

**7.8 Removing the power supply assembly**

Before to do this operation, follow the procedure described on paragraph **6.1.2 Removing the external panel (STEP 1-2)**, **7.14 Removing the aspirator**.

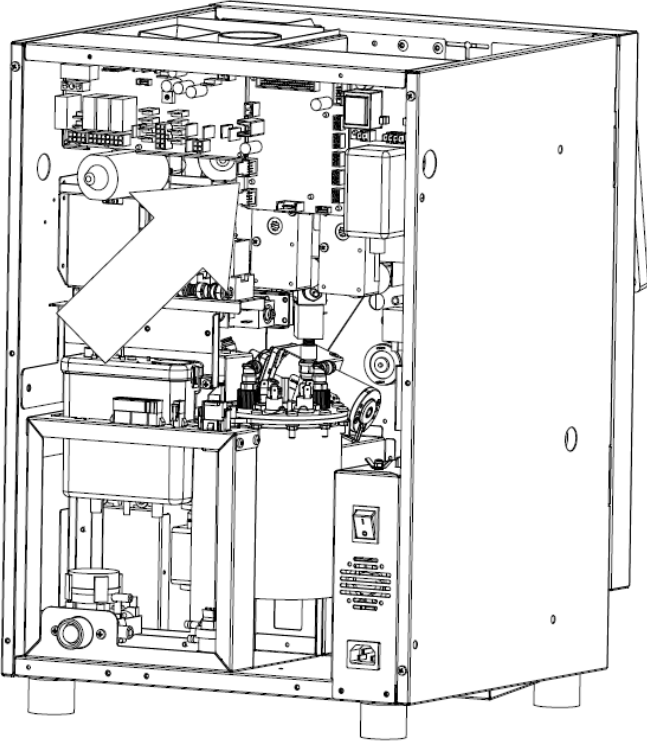

Step	Action	Illustration
1	<p>Remove the 9 ways connector and the ground cable from the top of the power supply assembly.</p> <p>Remove the 2 screws that fix the power supply assembly to the bottom side of the machine.</p>	

Step	Action	Illustration
2	Carefully slide out the power supply assembly from the machine.	

**7.9 Removing the electronic boards assembly**

Before to do this operation, follow the procedure described on paragraph **6.1.2 Removing the external panel** (STEP 1-2).

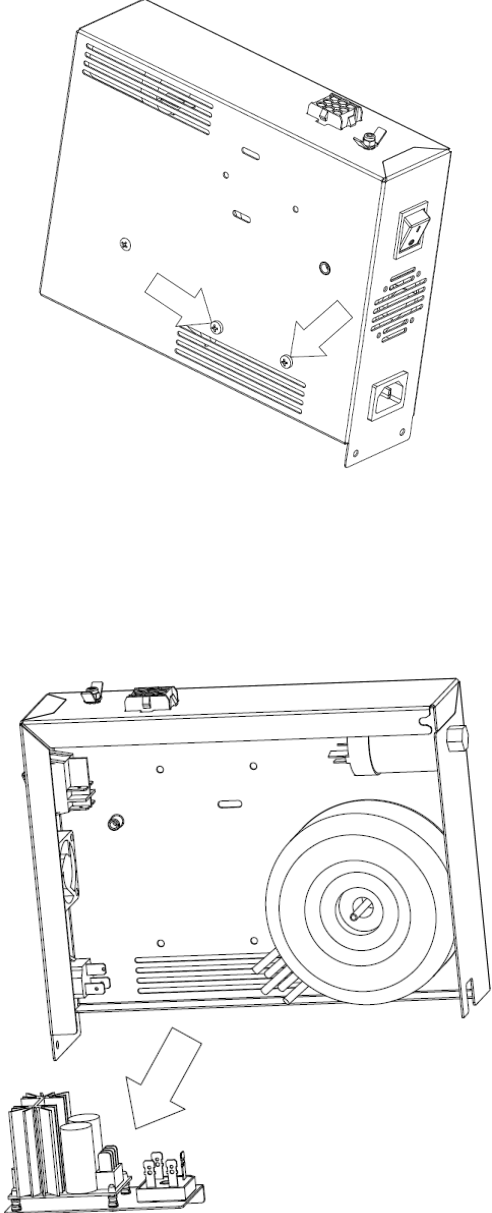

Step	Action	Illustration
1	<p>Remove the screw that is fixing the <b>electronic boards assembly</b> to the machine.</p> <p>Disconnect all the connectors from the output board, motherboard, water level board and the ground cable located on the right side.</p> <p>Disconnect the touch screen power supply cable.</p>	

Every electronic board is fixed to the support bracket with some white plastic fittings. It's not necessary to remove the whole **electronic boards assembly** to remove one of the boards. Simply disconnect all the necessary connectors and then disconnect the desired board by pushing the side of the associated white plastic fittings.

**7.10 Removing the power stabilizer board and rectifier board**

Before to do this operation, follow the procedure described on paragraph **6.1.2 Removing the external panel** (STEP 1-2) and paragraph **7.8 Removing the power supply assembly**.

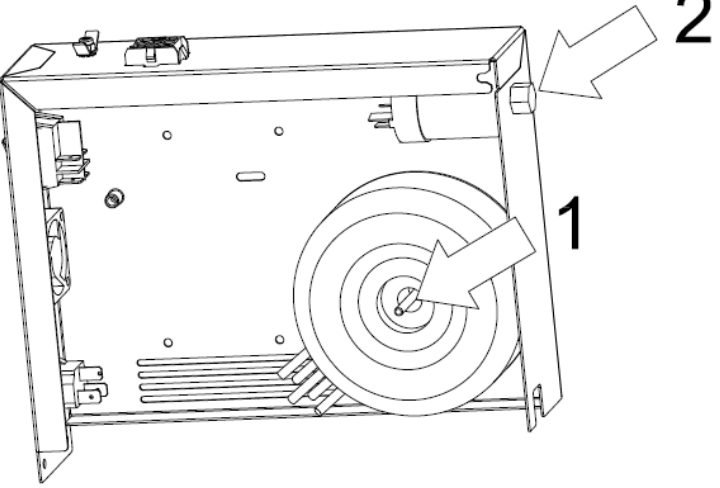

Step	Action	Illustration
1	<p>Unscrew the 2 screws located on the external left side panel of the power supply assembly.</p> <p>Take out the bracket that holds both the <b>power stabilizer board</b> and the <b>rectifier board</b>.</p>	

- 2 Disconnect the connectors from the **power stabilizer board** and then push the side of the white plastic fittings that fixes the **power stabilizer board** to the bracket.
- Disconnect the connectors from the **rectifier board** and unscrew the nut to release the board from the bracket.

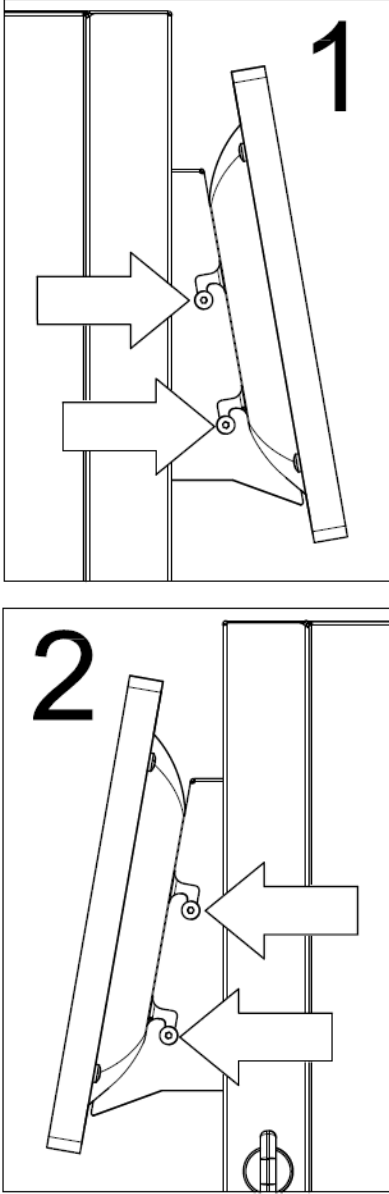

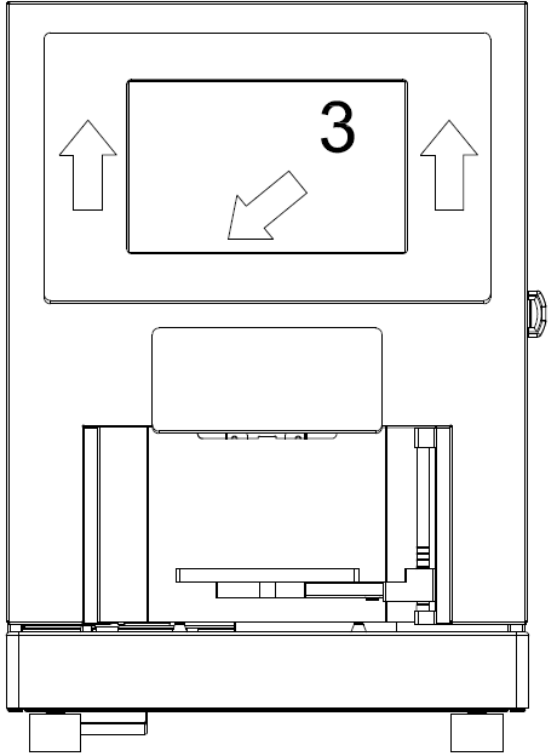

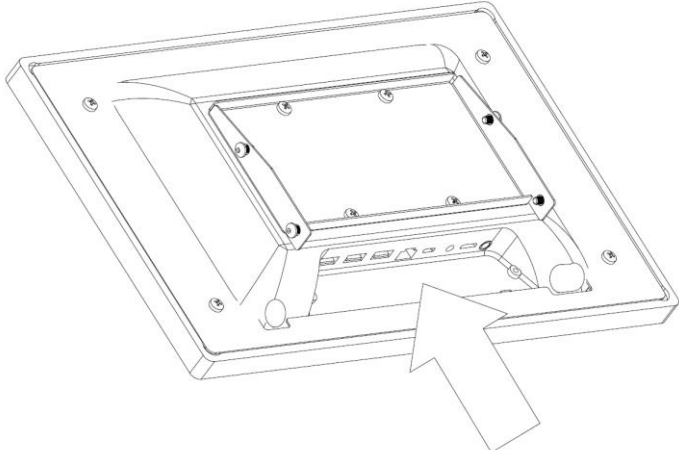

**7.11 Removing the net filter and the transformer**

Before to do this operation, follow the procedure described on paragraph **6.1.2 Removing the external panel** (STEP 1-2) and paragraph **7.8 Removing the power supply assembly**.

Step	Action	Illustration
1	<p>Disconnect the cables and remove the nut that fixes the toroidal <b>transformer</b> (1).</p> <p>Remove all the connectors attached to the <b>net filter</b> and remove the nut (2).</p>	

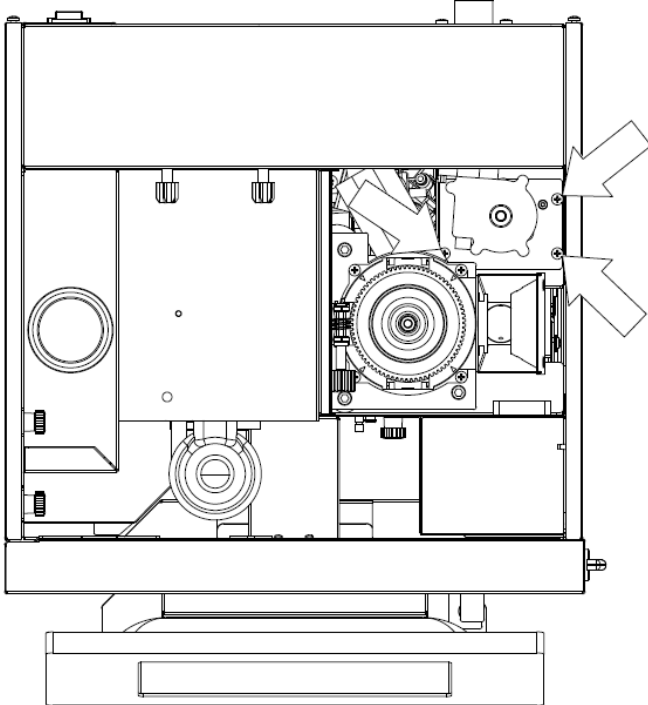

### 7.12 Removing the touch screen assembly

Step	Action	Illustration
1	Slightly unscrew the side screws that fixes the <b>touch screen assembly</b> to the machine's door support bracket.	

<p>2</p>	<p>Lift up the <b>touch screen assembly</b> and then carefully pull it toward you.</p>	
<p>3</p>	<p>Remove all the connectors from the touch screen in order to completely remove the <b>touch screen assembly</b> from the machine.</p>	

### 7.13 Removing the coffee group gearmotor

Before to do this operation, follow the procedure described on paragraph 6.1.2 **Removing the external panels** (STEP 1-2), paragraph 4.1 **Removing the coffee group** and paragraph 6.1.1 **Removing the top lid**.

Step	Action	Illustration
1	<p>Unplug the <b>coffee group gearmotor</b> connector from the back of the machine.</p> <p>Remove the 3 screws that fix the <b>coffee group gearmotor</b> from above.</p>	

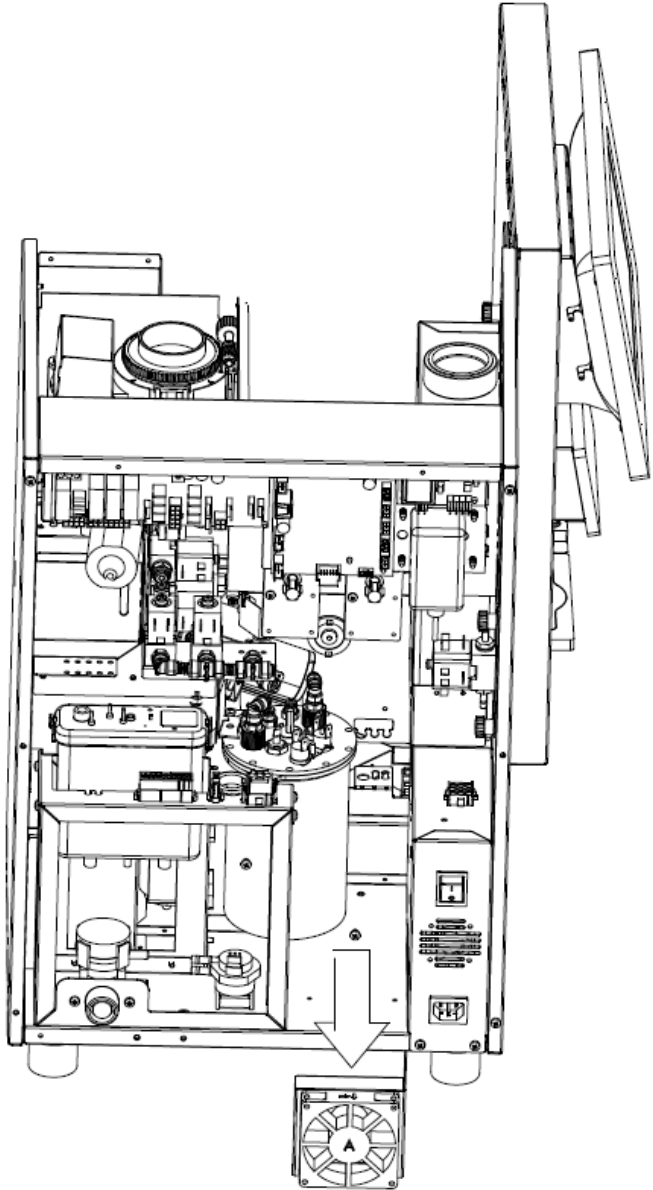

- 2 Lift up the **coffee group gearmotor** with its bracket and pull it from the back of the machine.

### 7.14 Removing the aspirator

Before to do this operation, follow the procedure described on paragraph 6.1.2 **Removing the external panels** (STEP 1-2).

Step	Action	Illustration
1	<p>Disconnect the 2 ways connector from the aspirator.</p> <p>Unscrew the knob that fixes the <b>aspirator</b> to the power supply assembly's left side panel.</p> <p>Remove the tube from the back of the fan.</p>	

## 9 Operations on the hydraulic circuit

All the operations described in this chapter needs to put the machine into safety conditions, to avoid any damage to the component and to the operator.

### 9.1 Cooling down

The machine **MUST BE COLD**. If not, the operator must do the following operations first.

- Turn **ON** the option “HEATING CONTROL” inside the “Technician menu” (see paragraph **5.3.6.2** on the **User Manual**);
- Switch **OFF** the machine and unplug the power cord;
- Disconnect the **heating element connectors** from the top of the boiler.
- Put back the power cord and switch **ON** the machine;
- Run a “Whipper Cleaning” (it’s called “Daily Cleaning” on non-fresh milk machines) to cool down the **water boiler**;
- Turn **ON** the option “HEATING CONTROL” again, at the end of the cleaning cycle (this is an additional security measure that will become useful when reassembling everything).
- Switch **OFF** the machine and remove the power cord.

After the above steps, carefully unscrew the boiler temperature probe with a key, in order to release any remaining pressure. Surround the boiler lid surface (around the probe) with a piece of paper before unscrewing the probe, in order to collect any water that would come out.

Secure the probe back again before to take out the boiler assembly.

## 9.2 Emptying the boiler

Before to do this operation follow the procedure described on paragraph **9.1 Cooling down** and paragraph **6.1.2 Removing the external panel**.

- Put compressed air (1 bar maximum) from the water inlet connector. Water will come out from the water outlet connector.

### CAUTION

**Don't connect back the heating element connector previously disconnected from the top of the boiler, during the time the boiler stays empty.**

**After the maintenance is finished, remember to switch ON the machine and run some "Whipper Cleaning" ("Daily Cleaning" on non-fresh milk machines) routines until water comes out of the drink nozzles, which means the water boiler is completely full of water.**

**Now the user can switch OFF the machine, connect back the heating element connector and switch back ON the machine.**

## **11 Operating the computer software**

## 13 Troubleshooting

This troubleshooting helps technician to find the cause of a problem starting from the error message shown by the **touch screen**.

All these error messages has been covered during the HLF Technical Training Course, where we strongly recommended to have a multimeter always available, in order to check possible bad connections.

### 13.1 E11-DRIP TRAY FULL

#### Why?

The option **DRIP TRAY SENSOR FLOAT** is active and the **drip tray switch** is engaged.

Cause of fault	Troubleshooting measure(s)
The <b>drip tray</b> is full of waste water;	Remove the <b>drip tray</b> , empty and clean it.
The plastic float is blocked;	Check if the plastic float inside the <b>drip tray</b> is free to move.
The <b>drip tray switch</b> is damaged or doesn't work;	Turn off the option <b>DRIP TRAY FLOAT SENSOR</b> inside the programming, to let the machine working anyway (refer to the user manual);  Replace the <b>drip tray switch</b> .
The connection is compromised	Check the wires from the <b>drip tray switch</b> to the <b>motherboard</b> (refer to the <b>Input/Output</b> table to understand which input number);  Replace the <b>motherboard</b> .

### 13.2 E12-PLACE YOUR CUP

#### Why?

The option **CUP SENSOR** is active and there's no cup placed on the dispensing point

Cause of fault	Troubleshooting measure(s)
<p>There's no cup placed on the dispensing point;</p> <p>The cup sensor is not installed in the machine;</p> <p>The <b>cup sensor</b> doesn't work;</p> <p>The connection is compromised</p>	<p>Place a cup.</p> <p>Turn off the option <b>CUP SENSOR</b> (refer to the user manual).</p> <p>Turn off the option <b>CUP SENSOR</b> inside the programming, to let the machine working anyway (refer to the user manual);</p> <p>Replace the <b>cup sensor</b>.</p> <p>Check the wires from the <b>cup sensor</b> to the <b>motherboard</b> (refer to the <b>Input/Output</b> table to understand which input number);</p> <p>Replace the <b>motherboard</b>.</p>

### 13.3 E13-FLOW METER K.O.

#### Why?

The flow meter is not detecting the water passing through the circuit.

Cause of fault	Troubleshooting measure(s)
<p>The message appears during a coffee cycle only, and not during a hot water or soluble drink. No coffee comes out or at least a very poor flow:</p> <ul style="list-style-type: none"> <li>▪ The <b>coffee group</b> is dirty;</li> <li>▪ The <b>grinder</b> is set too fine;</li> <li>▪ The <b>coffee valve</b> may be blocked by lime scale;</li> <li>▪ The <b>coffee valve</b> got fault.</li> <li>▪ The connection is compromised.</li> </ul>	<p>Launch a <b>Coffee Group Cleaning Cycle</b>.</p> <p>Wash the <b>coffee group</b> under hot water.</p> <p>Move the <b>grinder blades</b> to a coarser position.</p> <p>Take it off and clean it or replace it.</p> <p>Replace it.</p> <p>Check the wires from the <b>coffee valve</b> to the <b>output board</b> (refer to the <b>Input/Output</b> table to understand which output number).</p>
<p>The message appears during the dispensing of a specific product, while is not appearing during the dispensing of all the other products; The water for that specific product doesn't come out:</p> <ul style="list-style-type: none"> <li>▪ The <b>valve</b> related to the product that fails may be blocked by lime scale;</li> <li>▪ The <b>valve</b> related to the product that fails got fault;</li> </ul>	<p>Take it off and clean it or replace it.</p> <p>Replace it.</p>

Cause of fault	Troubleshooting measure(s)
<ul style="list-style-type: none"> <li>▪ The connection is compromised.</li> </ul> <p>The message appears during the stand-by:</p> <ul style="list-style-type: none"> <li>▪ The <b>discharge valve</b> may be blocked by lime scale;</li> <li>▪ The <b>discharge valve</b> doesn't work.</li> <li>▪ The connection is compromised.</li> </ul>	<p>Check the wires from the <b>valve</b> related to the product that fails, to the <b>output board</b> (refer to the <b>Input/Output</b> table to understand which output board and output number).</p> <p>Take it off and clean it or replace it.</p> <p>Replace it.</p> <p>Check the wires from the <b>discharge valve</b> to the <b>output board</b> (refer to the <b>Input/Output</b> table to understand which output number).</p>
<p>The message appears during the dispensing of any product and the water doesn't come out:</p> <ul style="list-style-type: none"> <li>▪ The <b>air-break</b> is empty, but no <b>E-16 CHECK WATER</b> message appears;</li> <li>▪ The <b>pump</b> doesn't work:</li> </ul> <ul style="list-style-type: none"> <li>- The <b>pump</b> got fault;</li> <li>- The <b>output board</b> got fault.</li> </ul>	<p>Refer to paragraph <b>13.5 E16-CHECK WATER</b></p> <p>Check the connection between the <b>pump</b> and the <b>output board</b> (refer to the <b>Input/Output</b> table to understand which output number).</p> <p>Replace it.</p> <p>Replace it.</p>

Cause of fault	Troubleshooting measure(s)
<ul style="list-style-type: none"><li>▪ The <b>flow meter</b> is blocked;</li></ul> <p>The message appears during the dispensing of any product and the water comes out for few seconds, then stops:</p> <ul style="list-style-type: none"><li>▪ The connection is compromised;</li></ul> <ul style="list-style-type: none"><li>▪ The <b>flow meter</b> got fault.</li></ul>	<p>Check if the <b>flow meter</b> is blocked. If yes, replace it.</p> <p>Check if the green LED of the <b>motherboard</b> blinks while the pump is working. It shouldn't. Check the wires from the <b>flow meter</b> to the <b>motherboard</b> (refer to the <b>Input/Output</b> table to understand which input number).</p> <p>Replace it.</p>

**13.4 E15-COFFEE GROUP OUT**

**Why?**

The **coffee group presence switch** is not engaged.

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
<p>The <b>coffee group</b> is not in the correct position;</p> <p>The <b>coffee group presence switch</b> is damaged or doesn't work;</p> <p>The connection is compromised</p>	<p>Check the <b>coffee group</b>.</p> <p>Replace the <b>coffee group presence switch</b>.</p> <p>Check the wires from the <b>coffee group presence switch</b> to the <b>motherboard</b> (refer to the <b>Input/Output</b> table to understand which input number).</p> <p>Replace the <b>motherboard</b>.</p>

### 13.5 E16-CHECK WATER

#### Why?

The machine has asked for water inside the **air-break** for more than the time set on the option **FILLING WATER TIMEOUT**.

Cause of fault	Troubleshooting measure(s)
<p>Switch ON the machine and look if the time the air-break needs to fill up completely is too long. If yes, it means the pressure of the plumb circuit is very low;</p> <p>The machine is not filling water at all, but the LED on the water level board is ON:</p> <ul style="list-style-type: none"> <li>▪ Maybe the overflow system has been engaged because the machine has been moved without draining the <b>air-break</b> first;</li> <li>▪ The <b>main inlet water valve</b> is gone.</li> </ul> <p>The machine is filling water, but once reached the shorter probe, it keeps filling all the time. The LED on the water level board is still ON;</p> <ul style="list-style-type: none"> <li>▪ Wrong sensitivity setting;</li> <li>▪ The <b>air-break probes</b> are dirty;</li> <li>▪ The connection is compromised;</li> <li>▪ The <b>water level board</b> got fault.</li> </ul>	<p>Raise up the <b>FILLING WATER TIMEOUT</b> option.</p> <p>Follow the procedure at the end of the paragraph.</p> <p>Replace it.</p> <p>Check the sensitivity bridge on the water level board. Only position 1 should be activated.</p> <p>Clean them.</p> <p>Check the connections from the <b>air-break probes</b> to the <b>water level board</b>.</p> <p>Replace it.</p>

Cause of fault	Troubleshooting measure(s)
<p>The machine is filling water, but once reached the shorter probe, it keeps filling all the time. The LED on the water level board turns OFF once reached the shorter probes;</p> <ul style="list-style-type: none"> <li>▪ The <b>main inlet water valve</b> stays open all the time;</li> <li>▪ The <b>output board</b> got fault;</li> <li>▪ The <b>motherboard</b> got fault;</li> </ul>	<p>Replace it</p> <p>Replace it.</p> <p>Replace it.</p>

**How to unblock the main inlet water valve**

- Switch OFF the machine;
- Disconnect the water line pipe;
- Disconnect the overflow pipe from the **main inlet water valve** and drain the water inside;
- Switch back ON the machine and wait for the **coffee group** positioning. The **main inlet water valve** opens.
- Switch OFF the machine and connect back the water line pipe and the overflow pipe;
- Switch ON the machine.

### 13.6 E17-HEATING

#### Why?

The machine is heating up the **boiler**. Wait for the machine to be ready.

### 13.7 E18-CLEANING CYCLE REQUIRED

#### Why?

Or the option **HEATING CONTROL** is active.

Maybe it's the first time the machine is installed and it needs a cleaning cycle in order to fill the **boiler** with water, or somebody has switched ON the **HEATING CONTROL** option.

#### NOTE

Once the option **HEATING CONTROL** is activated, it can't be turned off from the programming.

Access the cleaning routine and run a **WHIPPER CLEANING**.

### 13.8 E19-DESCALING REQUIRED

#### Why?

The number of liters set in the **DESCALING CAPACITY** option has been done and the option **IN-LINE FILTER** is disable.

Clean the water boiler from lime scale by dismounting it from the machine.  
After that, go into the programming > **COUNTERS** > **TECHNICAL DATA** and clear the liters counter.

### 13.9 E23-EMPTY GROUNDS DRAWER

#### Why?

The number of coffee set in the **MAX NUMBER OF GROUNDS** option menu has been done.

Follow the instruction manual to clear the message.

### 13.10 E24-DOOR OPEN

#### Why?

The front door micro switch is not engaged.

Cause of fault	Troubleshooting measure(s)
<p>The <b>front door</b> is open;</p> <p>The front door is closed, but the message stays still.</p> <p>The connection is compromised</p>	<p>Close it;</p> <p>The <b>front door micro switch</b> is damaged. Replace it</p> <p>Check the wires from the <b>front door switch</b> to the <b>motherboard</b> (refer to the <b>Input/Output</b> table to understand which input number).</p> <p>Replace the <b>motherboard</b>.</p>

### 13.11 E25-CHECK FILTER

#### Why?

The number of liters set in the **DESCALING CAPACITY** option has been done and the option **IN-LINE FILTER** is active.

Replace the de-scaling filter with a new one and go into the programming > **COUNTERS > TECHNICAL DATA** and clear the liters counter.

**13.12 E39-COFFEE GROUP POSITIONING****Why?**

The coffee group is moving. Wait for the completion of the movement.

Cause of fault	Troubleshooting measure(s)
The message stays still even if the coffee group doesn't move.	Maybe you've just put back the coffee group. Remove the <b>white door key</b> and put it back, or close the <b>front door</b> .

**13.13 E58-BOILER 1 PROBE OVER TEMPERATURE****Why?**

The board is measuring a temperature above 120°C

Cause of fault	Troubleshooting measure(s)
The temperature probe got fault;	Replace it.

**13.14 E59-BOILER 1 PROBE DISCONNECTED****Why?**

The board is measuring a temperature below 0°C

Cause of fault	Troubleshooting measure(s)
The temperature probe is disconnected;	Check the connections
The temperature probe got fault.	Replace it.

**13.15 E62-CHECK GRINDER 1**

**Why?**

The **grinder** is blocked.

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
A harder beans has gone into the grinder.  The coffee <b>grinder</b> is blocked also with the blades totally opened.	Move as more as possible the <b>grinder blades</b> to the coarse position and run a coffee.  Check if it's time to replace the blades;  Open the <b>grinder blades</b> and check if there is something inside.

**13.16 E72-CLEAN COFFEE GROUP****Why?**

The machine has detected an unusual current consumption of the **coffee group gearmotor**.

Cause of fault	Troubleshooting measure(s)
The <b>coffee group</b> is dirty.	Remove the <b>coffee group</b> and clean it from the coffee.  Put some grease on the main screw and O-Rings.

**13.17 E73-FLASH MEMORY ERROR / E102-EEPROM WRITE ERROR MOTHERBOARD****Why?**

Error while saving data on the motherboard. Replace it.

**13.18 E74-COFFEE GROUP TIMEOUT****Why?**

The **coffee group** has taken too much time to finish a positioning than usual.

Cause of fault	Troubleshooting measure(s)
The <b>coffee group</b> wasn't in the position the machine expected.	Push on the notification to reset the coffee group.

**13.19 E75-COFFEE GROUP MOTOR TIMEOUT**

**Why?**

The **coffee group counter** is no more counting.

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
The <b>coffee group</b> has suddenly blocked during a movement;	Check that the <b>coffee group chamber</b> is not completely on the bottom or on the top of the unit.
The <b>coffee group</b> is dirty;	Clean the coffee group.
The <b>coffee group</b> is full of coffee puck;	Remove the coffee group and clean it.
The connection is compromised;	Check the connection between the <b>coffee group motor counter</b> and the <b>output board</b> .
The <b>motor counter</b> got fault.	Replace it.

**13.20 E100-FLASH WRITE ERROR OUTPUT BOARD 1****Why?**

Error while saving data on the output board 1. Replace it.

**13.21 E102-EEPROM WRITE ERROR MOTHERBOARD****Why?**

Error while saving data on the output board 1 or 2. Replace it.

**13.22 E111-OUTPUT BOARD 1 VERSION INCOMPATIBLE****Why?**

The motherboard has detected an output board 1 software version that is not compatible to its current version.

Usually the problem happens after a manual motherboard software update, because the motherboard software version becomes more recent while the output board software version is too old to suite the motherboard new features.

**NOTE**

Normally you shouldn't need to upgrade a board manually, because everytime a new touch screen software version is installed, the touch screen automatically updates the boards according to its features.

**Solution:**

Make sure to have all the boards upgraded to the latest versions at the same time.

**13.23 E119-CHANGE GIVER INCOMPATIBLE**

**Why?**

The change giver connected to the machine is not compatible to the current machine settings.

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
The base coin of the change giver is different than the one set into the machine.	Check which base coin the change giver uses (refer to the instruction manual of the change giver) and make sure the machine is using the same value.

**13.24 E120-CASHLESS DEVICE INCOMPATIBLE**

**Why?**

The cashless device connected to the machine is not compatible to the current machine settings.

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
The base coin of the cashless device is different than the one set into the machine.	Check which base coin the cashless device uses (refer to the instruction manual of the cashless device) and make sure the machine is using the same value.

### 13.25 E121-BILL VALIDATOR INCOMPATIBLE

#### Why?

The bill validator connected to the machine is not compatible to the current machine settings.

Cause of fault	Troubleshooting measure(s)
The base coin of the bill validator is different than the one set into the machine.	Check which base coin the bill validator uses (refer to the instruction manual of the bill validator) and make sure the machine is using the same value.

### 13.26 E122-OUT OF COFFEE GRINDER 1

#### Why?

1. The **coffee group** has not been able to press the coffee properly.

Cause of fault	Troubleshooting measure(s)
The <b>beans hopper</b> is empty or closed;	Re-fill coffee <b>beans hopper</b> with fresh coffee beans and open the coffee stopper making sure the safety pin is completely out of the hopper;
The <b>grinder</b> runs, but there's not enough coffee inside the <b>coffee group chamber</b> ;	The blades need to be changed (verify if 20000 cycles are reached) or the ground is too fine. Open the <b>grinder adjuster</b> ;
The <b>grinder</b> runs but no coffee falls inside the <b>coffee group chamber</b> .	The coffee is blocked somewhere. Check the <b>grinder funnel</b> .

**13.27 E124-COFFEE GROUP CLEANING REQUIRED**

**Why?**

The number of coffee set with the option **NUMBER OF COFFEES FOR CLEANING CYCLE** has been reached.

Enter the cleaning routines and run a **Coffee Group Cleaning**.

**13.28 E125-NOT CONNECTED**

**Why?**

The **touch screen** is not connected to the **Bluetooth module** installed on the **motherboard**.

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
The screen is stucked;	Switch OFF the machine and back ON again.
The Bluetooth device used by the touch screen is not matching the one installed into the machine;	Follow the connection procedure at the end of this paragraph
The <b>Bluetooth module</b> got fault.;	Replace it
The <b>touch screen</b> got fault.	Replace it.

**Bluetooth module connection procedure**

Everytime there's the need to replace the **Bluetooth module** or the **touch screen**, the connection must be set up from the beginning.

1. Enter the programming > Settings > BLUETOOTH
2. Press the button **RESET DEVICE LIST** to clear all the devices previously registered. (all the buttons should become unavailable for few seconds)
3. Once the buttons are back available, press **SEARCH**;
4. On the "Bluetooth device search" window Press **SEARCH** again. The touch screen is now searching for any bluetooth device around;

During the searching, the button **SEARCH** turns into **STOP**. Once the touch screen has finished the searching it will turn back to **SEARCH** again. (This could take even few minutes);

5. Push on the device that's named with the serial number of the machine (i.e. 140000123) The message **CONNECTING...** will be displayed in yellow;
6. After few seconds the touch screen will ask for a PIN. Put **1234**;
7. In few seconds the message **CONNECTING...** should turn into **CONNECTED** displayed in green;
8. Go all the way back pushing the arrow on the the top left corner.

**13.29 E128-CASHLESS 2 MALFUNCTION**

**Why?**

The mobile cashless device is reporting a generic malfunction

Cause of fault	Troubleshooting measure(s)
Generic malfunction of the mobile cashless device.	Check with the Service and Support of the mobile cashless device.

**13.30 E129-BOILER HEATING FAILURE**

**Why?**

The boiler has taken more than 5 minutes to reach the temperature set.

Cause of fault	Troubleshooting measure(s)
The communication is compromised.	Check the continuity between the wires that goes on the thermostats from the output board (refer to the <b>Input/Output</b> table to understand which output number).
The boiler heating element got fault.	Replace it.
The output board got fault.	Replace it.

**13.31 E130-REFUND CASHLESS 1 NOT AVAILABLE****Why?**

The cashless device is reporting that it doesn't have the capability to refund money if a transaction goes wrong.

**No solutions****13.32 E131-CASHLESS DEVICE 2 INCOMPATIBLE****Why?**

The mobile cashless device connected to the machine is not compatible to the current machine settings

**Cause:**

The base coin of the mobile cashless device is different than the one set into the machine.

**Solution:**

Check which base coin the mobile cashless device uses (refer to the instruction manual of the mobile cashless device) and make sure the machine is using the same value.

**13.33 E132-REFUND CASHLESS 2 NOT AVAILABLE****Why?**

The mobile cashless device is reporting that it doesn't have the capability to refund money if a transaction goes wrong.

**No solutions**

**13.34 E133-CASHLESS 1 MALFUNCTION**

**Why?**

The cashless device is reporting a generic malfunction

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
Generic malfunction of the cashless device.	Check with the Service and Support of the cashless device

### 13.35 E141-FILLING WATER

#### Why?

The option **FILLING WATER CONTROL** is active and the machine is filling the **air-break**.

This option is active by default, because it guarantees that the **air-break** is full of water before to start the dispensing of any drink.

This avoid potential blockage of the milk coil due to a lack of water from the main water line and also makes a possible water line problem more visible.

#### CAUTION

The decision to switch this option to **OFF** is completely responsibility of the technician, who must make sure at least to meet the minimum requirements reported on the Instructions Manual of the machine.

### 13.36 E168-OUTPUT BOARD 1 INCOMPATIBLE

#### Why?

The machine is detecting that the hardware of the output board 1 is not compatible with the machine.

Cause of fault	Troubleshooting measure(s)
The <b>output board</b> hardware is not compatible with the machine;	Please check if the boards code, printed on the board's label is 9SSOB0104. If it is different, remove it and replace with one with the right code.
The <b>output board</b> got fault	Replace it.

**13.37 E198-DETERGENT TANK LEVEL LOW**

**Why?**

The machine is detecting that the detergent inside the tank is insufficient.

Cause of fault	Troubleshooting measure(s)
Insufficient level of detergent in the tank.	Fill the detergent tank.
The <b>detergent tank level sensor</b> got fault.	Replace it.

**13.38 E198-COMMUNICATION ERROR**

**Why?**

The touch screen is not communicating with the machine.

Cause of fault	Troubleshooting measure(s)
The <b>usb communication board</b> is faulty.	Replace the board.
The serial cable that connects the <b>usb communication board</b> to the motherboard is interrupted.	Replace the serial cable.
The cables and the board are fine but there's no power coming from the motherboard.	Check the main supply to the motherboard, if present change the motherboard.

**13.39 E198-USB NOT CONNECTED****Why?**

The touch screen is not connected to the usb communication board.

<b>Cause of fault</b>	<b>Troubleshooting measure(s)</b>
The <b>usb communication board</b> is faulty.	Replace the board.
The usb cable that connects the <b>usb communication board</b> to the touch screen is interrupted.	Ensure the usb cable is connected to the touch screen's port. Replace the usb cable.
The cable and the board are fine but the error is still showing.	Change the usb port where the usb cable is connected to. Change the touch screen.

## **14 Electronic boards description**

14.1 Mother board

1. Executive / MDB device connector
2. Machine bus connector
3. 24V DC power supply
4. Inputs connector (40 ways connector)
5. Coin mechanism connector
6. Temperature probes connectors (in order from left to right):
  - Connector 1
    1. Boiler temperature probe
    2. Common cable for boiler and coffee group temperature probes
    3. Coffee group temperature probe (not used anymore)

Remaining connectors are unused

7. Hardware programming (for manufacturer only)
8. Bluetooth module connector

### 14.2 Output board

1. Counter connectors (the one on the right is the coffee group motor counter one)
2. Machine bus connectors
3. Board number selector
4. 24V DC power supply
5. Outputs connector n°4
6. Outputs connector n°3
7. Outputs connector n°2
8. Outputs connector n°1
9. Heating element connector
10. Hardware programming (for manufacturer only)

### 14.3 Water level board (external water kit only)

#### 1. Sensibility bridge:

- None = Minimum sensibility. The board feel the presence even of distilled water;
- 1 = Independently of the sensibility, when filling, in the moment the water level reaches the maximum, the machine will fill for 2 seconds more (default position for air-break);
- 2 = Less sensibility than None
- 3 = Less sensibility than 2 (default position for steam boiler)
- 2+3 = Less sensibility than 3 (for really hard water)

2. Led: lightened when the water level is below the minimum

3. Water level board microchip socket

4. Inputs connection

5. 230V AC connection

#### 14.4 Power stabilizer

1. 24V DC connection
2. 24V AC connection
3. Ground connection
